

NEWS IN BRIEF

China voices
concern
to IBM chief

THE IBM delegation to China, led by chairman and chief executive Frank Cary (CW, November 3) stopped off in Hong Kong and is believed to have discussed automation plans with the subsidiaries there of the Peoples' Bank of China. Business with the Hong Kong branch is seen as a possible entree to the bank's 15,000 branches on the mainland.

Improved 7.760

SIEMENS has improved the performance of its top-of-the-line 7.760 by about 10%. The 7,000 series mainframe consoles can now be fitted with floppy discs. Its line of disc drives has also been enhanced and a 300 Mbyte exchangeable disc unit has been introduced.

Euro HQ

A NEW European headquarters is to be established in London by the Perterc Microprocessor Division, manufacturers of the Altair microcomputer system. The office, which will provide support for Altair sales outlets, is scheduled to open in the new year.

Personal pay-up

OVER 500 people on Saturday attended a seminar introducing the Nascum 1 personal computer kit. And 60 of them paid out the £197.50 asking price there and then.

'Crusade against computers
in the Civil Service'—Tory MP

THE Government is coming under increasing pressure from MPs on both sides of the Commons to give greater recognition to the UK computer industry. Conservative MP Kenneth Warren has accused the Department of Industry of being slow to promote the development of computers, and Labour MP Eric Moonman has described studies of the industry as "a lot of lip-service which don't add up to a sensible strategy."

In an exchange in the Commons with the Civil Service Minister, Charles Morris, Warren said, "May I ask the Minister whether he has noticed that there seems to be a crusade against computers in many areas of the Civil Service? Will he try to get a move on with the introduction of computer services on a wider scale, and will he consult his colleagues in the Department of Industry to discover why that department is so dilatory in promoting the development of computers which the government could use?"

Civil Service Minister Charles Morris, in demand of a Civil Service campaign against the computer industry.

ASTMS wants say
in NCR sales policy

By Robin Webster

Representing about 700 field engineers at NCR, ASTMS has also submitted a Section 11 reference to the Advisory, Conciliation and Arbitration Service seeking to extend its collective bargaining rights to all grades of NCR staff rather than just the engineers.

Section 11 is a request for an employer to recognise a union as the bargaining body. This would open the door to management, sales, clerical and data processing staff to become ASTMS members and to have their pay and conditions negotiated by the union.

DEC machine meets
Trent Poly budget

BECAUSE a proposed ICL 2960 was outside the budget set by the local authority, it had to be rejected by Trent Polytechnic. Nottingham, in favour of a £400,000 Digital Equipment DECsystem 20.

This order is another sign of the trend in the higher education market away from mainframes. Last month Loughborough University placed a £282,000 order for two Prime 400s, and several other establishments are planning mini-based configurations to replace mainframe systems.

DEC has already done well in the educational market with all eight of the DECsystem 20s so far ordered in the UK going to colleges and universities. The Open University has three for its student computer service.

At Trent, an ICL 2960 is to be replaced by the DECsystem 20. The new machine will substantially enhance the interactive computing capability at the poly and also improve the service offered to many local schools and colleges. Since 1974 these services have been run on a now heavily overloaded PDP-11/40.

Brain
drain
protest

THE Civil Service is experiencing an "extensive drain" of programmers and analysts due to low pay levels, says Campbell Christie, deputy general secretary of the Society of Civil and Public Servants.

Currently there is a 20% annual turnover of software staff in the Civil Service. "It is a very difficult situation," he said, "and unless something is done soon, the government will be in difficulty in this area."

This week the SCPS, which represents executive grade civil servants, and the Civil and Public Servants Association, which represents clerical grades are holding nationwide protest action against the government's failure to restart an independent pay research unit in time for 1978 pay negotiations (CW, October 20).

The actions taken will be left to local areas to decide and are likely to be irritating rather than involving any major stoppages. The pay limit unit is to be operational in time to provide information for a 1979 pay settlement.

EEC study
paves way
to unified
privacy law

STANDARD data protection legislation throughout Europe could result from an EEC study of privacy and security laws carried out by the UK's National Computing Centre and its counterparts in Germany and France.

While the NCC is looking at security standards the Germans are considering legal aspects. Their plans for European legislation will be based largely on legislation in France and Germany, the only two EEC countries which so far have introduced data protection laws.

An EEC directive, which would be binding on all EEC countries, is expected to be the outcome of the study. But a directive is likely to be aimed at countries which have no or inadequate plans for legislation. It is not expected to affect to great extent countries which have introduced laws.

By the time the study is complete, at the end of 1980, the UK will almost certainly be one of the countries to have introduced legislation.

The Data Protection Committee, which is drawing up recommendations on legislation in the UK, is expected to report to the government in the first quarter of next year, possibly in January.

Having in mind the EEC study, the Data Protection Committee is understood to have looked very closely at the law being introduced in Germany and France and modelled its recommendations accordingly.

Briefing
E-series New
Year launch

INDUSTRY sources now say that the IBM E-series, which will replace the bottom end of the 370 line, is scheduled to be announced in January (CW, October 1). At the top end of the line, IBM is said to be working on an H-series to replace the 300 line and perhaps extend down to the 370/148. It is likely to be announced in 1979.

The Orbit minicomputer, also coming shortly from IBM's DP division, is now expected to be announced in February. Orbit is expected to be a larger and more powerful mini than General Systems Division's Series 1. In its present form, and likely to include more system software, it will provide an alternative to Series 1 and IBM's own devices like 3780 for network builders (CW, November 3).

Change of plan

A STATEMENT reported in the US from the new ICL Inc OEM manager that the company is about to launch a new point of sale terminal and a banking teller terminal has caused ICL to alter its plans. The PoS terminal, long expected as a successor to the Singer product, will now be launched sooner than planned, and will be shown to selected customers at a retail show in the US next month. ICL denies that anything new is planned in the banking area.

Allegation

WHILE it is true that Laur Punter made an allegation against Vellorax under the CSA code of conduct before Laur Punter went into liquidation (CW, December 1) the director general of the CSA, Alan Benjamin, told Computer Weekly that "the circumstances of the allegation make it extremely difficult to give Vellorax an opportunity to respond to the allegation."

China contract

AS forecast (CW, September 21), IBM is likely to gain a major contract from the Bank of China in Hong Kong. A deal worth over \$20 million involving two 3032 mainframes plus banking terminals is being discussed. The bank is owned by the People's Republic of China.

Star delay

AFTER Honeywell's problems with CPU chips for the 68/85, which has delayed that machine until 1979, Control Data has hit similar snags with circuits for the Star 100A large-scale scientific processor. It was to be launched late this year, but will not now appear until next year.

\$1m rents

RENTAL business worth £1 million over the next three years has been placed with BASF by two of the biggest users of its IBM-compatible peripherals: the British Mail Order Company of Manchester, and Midland Household Stores of Nottingham. Both are subsidiaries of Great Universal Stores.

IBM software, particularly the MVS operating system, could become the de facto industry standard in a future in which IBM's mainframe competitors might have to come to terms with providing IBM-compatible systems. And IBM seems to be putting more effort in trying to place stumbling blocks in the way of competition rather than serving the best interests of its customers. Those are just two of the stimulating thoughts of Gene Amdahl (above) as expressed in an exclusive interview last week. Read Tim Palmer's report on page 14.

Export drive
in Mexico

THE Department of Industry is considering giving support to British service companies and ICL to boost a British computer export drive in Mexico. The Computing Services Association sees Mexico as an attractive export market and would look to the government for some backing. ICL already has a company in Mexico in which it has a 49% stake, with the rest owned by Mexican commercial interests.

French firm hit by
South African boycott

THE tough international attitude to trade with South Africa has cost a French company an order for computer-controlled telephone equipment, but US computer companies are unlikely to follow Control Data's lead in restricting new investment there (CW, December 1). The South African government has cancelled an order from the CIT-Alcatel subsidiary of CGE for a network of 510 computer-controlled telephone exchanges, because it fears that spare and maintenance may be cut off in the future. The leaders in the South African computer market are ICL and IBM, with Burroughs close behind, third. Burroughs and IBM both say that they were among the original six principles agreed by US companies which cover equality of pay and wages for all employees (CW, March 10, 1977), and that they have no further plans to alter their approach to the South African market. ICL's position could become more difficult if the EEC goes ahead with a directive to Community companies not to export in South Africa.

'As significant as the introduction of penny post'

FOLLOWING a series of seminars in London and Manchester, over 200 data communication users have contributed to the final draft of the questionnaire to be sent out by the National Committee on Computer Networks shortly before Christmas. The questionnaire is being restructured this week to meet the main criticisms made by those attending the seminars.

Trevor Hyman, of the NCCN secretariat, told Computer Weekly that although the users attending the first seminar had been critical of the questionnaire, all three sessions had been useful and constructive. "This is a very significant chance for users to have their say on something which could, as Alex d'Agapeyeff said at one of the seminars, become as significant and as universal as the introduction of the penny post."

The questionnaire is being distributed to as many of the users and potential users of data communications as the NCCN can identify from published sources, and the emergence of the Committee has been welcomed by the Post Office, which bodes well for acceptance of the results of the survey. Emphasising this at one of the seminars, Bryn Stanley, general secretary of the Post Office Engineering Union, commented that the Post Office had to press harder for new services. "We have been campaigning for something like this NCCN," he said. "It can help the Post Office make its case to government. Government does not yet understand the problems."

Lloyd's threat
to IBM users

By Keith Jones

THE dramatic price cuts introduced by IBM for its 3030 series could mean financial problems for existing users holding seven-year lease contracts with a four-year escape clause. Lloyd's underwriters are currently investigating the inflated "residual value" of some leased IBM systems — the value put on the system if the escape clause is invoked. The low price of the 3030 has made older system prices seem particularly high.

This could result in underwriters refusing to compensate lessees if they decide to invoke the clause but cannot obtain the expected residual value in full, even though they are insured against this eventuality. Lloyd's underwriters started covering residual values of leased computers about two years ago under what are commonly referred to as "J" policies. About £500 million worth of machines are believed to have been covered in date worldwide.

But a clause in the Lloyd's proposal form usually stipulates that the residual value must represent the current forecast market value of the machine at the point of early termination, based on information available.

However, industry sources indicate that the underwriters are also concerned about the size of residual values assigned to machines already covered, which in some cases are as high as 50% after four years — far higher than might be realisable in practice.

For this reason Lloyd's may dispute claims from lessees when their contracts reach the four-year mark and they find that they cannot realise the residual values put on their machines. The first claims should start being made in about two years from now.

The residual value of a machine after four years is assigned by the leasing company when it completes the proposal form for the underwriters and it is in the interests of the lessor to make the residual value as high as possible in order to offer the lessee a cheap deal over the first four years.

Prices down

PRICES of memory units for the Hewlett-Packard 3000 Series II Model 8 computer have been cut by 20%.

Prices of memory units for the Hewlett-Packard 3000 Series II Model 8 computer have been cut by 20%.

£128,000
computer
fraud

THE case of a man who committed a £128,000 computer fraud by sending false VAT claims to the Customs and Excise computer centre in Southend, is one of the highlights of The Money Programme on BBC 2 at 8.25pm tomorrow (December 9).

He created 80 companies, a number of which were not trading, and submitted VAT claims for about a year before Customs and Excise officials became suspicious. He was brought to trial earlier this year, and received a five-year jail sentence.

His only "cost" in committing the crime is believed to have been an understanding of how the ICL System 4 at the centre were programmed. A second case mentioned is that of a woman who worked for the Hampshire Health Authority. She recently received a one-year jail sentence after duplicating cheques paid out as expenses to medical staff. One cheque went to the correct destination while the other went into her account. As a rough guide to computer users, The Money Programme also asked Mike Comer, a fraud expert, to look at a particular company's system and point out the vulnerable areas.

Plight of artificial intelligence workers in a 'no win' state

ARTIFICIAL intelligence workers sometimes complain that they are placed in a 'no win' situation.

"Would it be intelligent if a machine could read a newspaper and give you a summary of its contents?" inquires the AI man.

"You bet!" replied the onlooker.

"Oh," says the AI man, "my student, Finknottle, just did that."

"How does his program work?" asks the onlooker with an air of suspicion.

After a spell with blackboard and terminal he decides that his suspicion was justified. "So that's all I don't call that intelligent."

Many of my colleagues find this understandably irritating. If every implementation of this or that aspect of intelligence is to be dismissed the moment it is understood, then what hope is there?

Both sides, of course, accept that there must be no trickery. A program which prints out just the headlines from a newspaper might achieve a surprisingly good summary. Rather than "... but you said that summarising newspapers was proof of intelligence" the honest programmer says "I fooled you! Think twice before you next agree on a test of intelligence."

I shall call tasks which do not require intelligence even from humans Type O tasks. More interesting cases arise when the task as defined cannot possibly be done by a

human except on the basis of considerable intelligence. Here most AI people have been content with the criterion: "Intelligence is as intelligence does".

I believe that we have been wrong, and that the nit-pickers are essentially on the right track.

The critic usually has at the back of his mind the power of the human brain to conceptualise its task environment. Some tasks, he realises, require a high degree of conceptualisation, if they are to be tackled at all, whether by brains or by machines.

An example would be watching a cricket match and preparing a newspaper report of the game. Even annotating a game of chess between club players would be regarded as a far more intelligent machine feat than a chess program's exploit in beating the players of such a game. Call such tasks Type 2 tasks.

Now we turn to an intermediate end, as we shall see, critical level of complexity. This intermediate level is occupied by tasks of Type 1. They demand a high degree of conceptualisation from the human practitioner, but offer the possibility, in this era of nanosecond processing and 10⁴ bit memories of finding machine solutions by other routes.

It is here that the critic is inclined to say "I see that any human who accomplishes these tasks must use intelligence. I also see that your program is very clever. But the

cleverness is all used, together with prodigious advantages in brute computing power, to avoid the necessity of putting any intelligence into the program.

"The degree to which it uses a conceptualised model of the problem-domain is rather trivial, and unlike human solvers it seems to have no power to revise or add to those few concepts which it has." For Type 1 tasks, he is right.

Examples of Type 1 can be found in weather prediction.

When the European Centre for Medium-range Weather Forecasting at Bracknell commissioned the Cray 1 machine in Britain at the end of October, they had upwards of 80 million instructions per second at their finger tips. No one will doubt their ability to extract, from massive numerical computations, one-week predictions which are better than the forecasts of unaided meteorologists.

Eventually the aspirations of computer-aided forecasting may grow to the point that conceptualised and mathematically structured models, of the kind beloved of AI people, will have to be integrated into the present super-computational representations. But by then, one suspects, unaided human forecasters, however intelligent, will have been left behind.

So, if a program describes a cricket match, we concede its intelligence without the need to look inside it. If it predicts the weather, we need to know

SOFTWARE

Test installation reports satisfaction with VR executive

how. Our error in the past has been ample failure to distinguish clearly between the two types.

Computer chess comes closest to meteorology in these respects than any other domain I know. Over the domain as a whole, human intelligence still easily out-performs brute-force computing. The task of building a grandmaster program probably belongs to Type 2, as also does the task of implementing a "general meteorologist" as opposed to a one-week forecaster. But there exist non-trivial sub-domains which are demonstrably of Type 1, and here an interplay can be observed between two very different "mentalities": the human and the machine.

Chess challenge

I HAVE been asked to have a look at the Chess Challenger, the desk-top machine designed, as its name implies, to provide a challenge to the chess player. It is based on an Intel 8080 microcomputer with a 16K ROM program and 512 bytes of RAM. It costs about £140.

I have carried out some trials with this device and it is important that the qualification "basic" is emphasised.

This utility model plays at so low a level that I cannot imagine it providing useful practice except to a beginner. But for a beginner the fact that it has no facility to detect illegal moves would prove a drawback.

There is an advanced model of more interest. This has three settings, for three levels of play of which the lowest corresponds to that of the basic model. At the highest setting the machine takes about half a minute finding its move and its play is that of a very weak club player, according to my subjective impression, perhaps about a 1350 rating on the US Chess Federation scale.

Such a player could of course get some practice. But the deterministic responses of the machine when repeatedly taken through the same playing sequence would largely vitiate its usefulness. A random tie-breaking facility for move selection would help a great deal.

I do not see so limited a device being a good buy, even though the styling and ease of operation deserve praise. Its play just is not tricky or flexible enough, and it makes blunders which even a four-ply look-ahead would avert.

The Chess Challenger is handled in the UK by Data Efficiency, of Hemel Hempstead, Herts. See page five.

STUDENTS of astrology will be interested to learn that combining the 2nd and 12th Signs of the Zodiac has been found to generate the 8th Sign, in other words

TAURUS
PISCES
SCORPIO

The mystic solution to this puzzle is

WHILE NCR Criterion users are waiting for a general release of the Virtual Resources Executive, VRX, for the machine, a test installation in the US has reported satisfaction with the performance improvement conferred by the executive.

The Atlanta Housing Authority has installed two Criterion 8570s to process a variety of accounting work. Keith Bates, assistant director of finance in charge of DP, said that, besides improving run time performance, AHA had improved the productivity of its programmers and operators and reduced key-punching.

Although much of the run time improvement could be ascribed to the more efficient hardware, which replaces an NCR Century 251, Bates agreed that the new executive had been an important factor. The other benefits cited are almost entirely the result of the software.

As the term "Virtual Resources" implies, the executive implements not only virtual memory — giving 8 Mbytes of virtual storage for each program — but also allows disc file accesses to be totally independent of the units on which the files reside.

This is clearly a factor in

CAP-CPP package launched in the UK

A SUITE of job accounting and performance measurement software for IBM machines, based on a product developed by ICI has been released in the UK and Europe through CAP-CPP. The product, in a steadily evolving form, has had several years' successful marketing in the US, from Buell and Babbings.

There are now three parts to the package, the Computer Accounting System, the Computer Performance Analyser and, the latest addition, Facility

Will-Denn contract

AT THE same time as CAP's UK release of performance measurement products based on ICI's CUM-2 (see story above), Will-Denn Resources, of Hordham, Sussex, the original UK agent for CUM-2, has made known its own further plans in performance measurement and related areas.

The company is working on a contract to design performance measurement products based on ICI's CUM-2 (see story above), Will-Denn Resources, of Hordham, Sussex, the original UK agent for CUM-2, has made known its own further plans in performance measurement and related areas.

Written in Assembler, the new software is claimed to be far more efficient than the original CUM-2 which was written in PL/I. Will-Denn sold about 15 copies of CUM-2, but admits that most of the installations are no longer using it. CUM-2 is still available from Will-Denn, but the company's exclusive UK rights expired last year.

The contract to Will-Denn for the new software was worth about £80,000. An interesting feature of the project is that all the software was written in

using the tasks of programming and operators. Moreover, since it confers greater flexibility in the placing of files on disc, it results in a saving of disc space.

The greatest saving in programming time and key-punching is, however, the task of the executive's attendant online program development facilities, said Bates. "If a program development work only advantage offered by VRX software, I still would have jumped at it."

Praise was not reserved for the NCR products. Another important benefit of the system was the improved quality of Total database management system and Query software. It has been taken up by NCR's standard DBMS, and Query was developed for NCR's Cincom (CW, August 25).

AHA's system is accessed through a network of terminals in its own local area, and a service bureau for other housing authorities.

The Criterion 8500 already at least one UK user, the Property Building Society, Ltd. (CW, August 26, 1976) there is no current UK test installation of VRX, and general release of the executive in the UK is expected until next year.

PROGRAMMER NOTES

More or better?

SOME of the long term programmers among our readers must have noticed that when they mention their occupation, people look less blank than they used to. The term "programmer" is becoming more familiar to the world at large — a reflection of the fact that the number of programmers is rapidly increasing.

With this growth, however, come doubts of whether it is adequate to service the rapidly growing number of installations. By 1985, a recent report predicted, the US programmer population will be a third of a million. This will probably provide far less than one programmer per machine, taking into account both general purpose computers and those performing dedicated functions.

Various suggestions have emerged for dealing with the increased demand. As with many topics related to programming, this column believes that the programmers themselves would be well qualified to add their voices.

In the first place, we must ask whether we should aim for more rapid numerical growth in the programmer population. The alternative is increased productivity per programmer, a subject which has already been treated in Programmer Notes (CW, November 18, 1976).

Suggestions for increasing productivity have included the usual range of "improved" programming techniques. These have been practised for some time, but do not seem, on the surface, to have resulted in any great increase in productivity.

Another prevalent opinion is that the fault lies not with the programmer's speed of working, but with poor scheduling, leaving large gaps in the day with no work to be done. There should be ways of remedying this, but every programmer knows it is still a shortcoming of most installations.

If productivity cannot be noticeably improved, then there is only one alternative — the number of competent programmers must be increased at a rate estimated to be far beyond current educational resources.

What is the best way to achieve this? Do we increase educational resources or ease the educational task by developing very high-level languages? Perhaps as one of our freelance correspondents suggests, we should allow trained programmers to remain programmers, and not force them to become systems analysts and managers in order to get a rise in salary.

Enhancements for Level 64 machines

A MAJOR software release has been announced by Honeywell for its Series 60 Level 64 machines. Scheduled to become available in the second half of next year, the software brings to the Level 64 several enhancements already implemented on the Level 68.

Enhancements will be made both to the main Gcos 64 operating system software and to associated areas such as database, data communications, file cataloguing and interface for interactive users.

The most significant operating system extension is to the multiprogramming capability. Gcos 64 can now support 10 concurrent "activities," each of which can be quite complex within itself. Support of an entire OS/2000 environment or management of up to 254 concurrent transaction processes

ing terminals can, for example, be accommodated as one activity.

As well as increasing its capacity, the operating system has gained new efficiency through dynamic optimisation of despatching priorities. If the CPU (time is not being efficiently utilised, the OS will change the priorities to improve overall performance.

On the communications side, the Level 64 Transaction Driven System has been enhanced to interface with Honeywell's standard database management software, IDS II. Security protection for the TP system has also been improved.

An alternative version of IDS II itself will emerge with the new release of software. Designed chiefly for the first time database user, it handles relatively simple database structures, and

Centre-File installs Total

ENHANCING its stockbroker service to offer international dealing and settlement, the Centre-File bureau has implemented Cincom's Total database management system on its IBM 370/155, as the basis of the new application.

The stockbroker service has been running for 11 years, offering a variety of accounting and online inquiry facilities for stockbrokers' dealings. Until now, however, all dealings have

been recorded in sterling, and the system has always used conventional files.

Software to handle deals in foreign currencies was acquired by Centre-File from one of its clients who had founded his system on a database, and Centre-File wished to change the design as little as possible. The original system was designed for Burroughs' Forté, and so an IBM-compatible DBMS had to be found.

Medical data on community

AN application in the useful but controversial area of relating separate databases is under development at the Department of Community Medicine at Leeds University. The exercise, based on a Digic Micro-16E minicomputer, collects medical data with data on the community.

Health authority information on the incidence of cancer and other diseases and hospital activity is to be cross-matched with geographical population data from Leeds' Local Authority Management Information System. Output will be a density distribution of diseases and hospital work in one-kilometre squares. This will be released to interested organisations.

The university stresses that data will be kept confidential throughout the collection. Information on individuals will not, of course, be extractable from the statistical output data.

Interdata launches TP monitor Itrac

THE transaction processing monitor, Itrac, for Interdata 32-bit minicomputers (CW, November 10), has been officially announced in the UK. Interdata has, at the same time, arranged UK seminars to introduce users to the product. This is part of a general response to user requests for more in-depth presentation of Interdata's hardware and software products.

Itrac, like most mainframe TP monitors, handles its transactions as a logical sequence, or "thread," through several small applications program modules, rather than involving a single large program. Several transaction "threads" can be handled concurrently, using the same or different modules.

At present, only Cobol program modules are supported under Itrac, but Interdata plans to extend the software to interface with other languages.

Particular Itrac features include interactive definition of screen formats, incorporating validation criteria for entered data fields. A format is designed simply by creating its image on the terminal screen. Formats can be re-defined, even while Itrac is running, says Interdata.

The end user can also interact with Itrac applications through "menu" displays, allowing selection of the next application to be performed. The TP monitor includes password protection, and file and record locking, as well as full recovery facilities.

Itrac runs under the OS/32 MT operating system and uses Interdata's Telecommunications Access Method, Iam, and Index Sequential Access Method, Isam. UK price for Itrac is £4,300.

Details of the Itrac seminars can be had from Interdata Ltd, 227 Both Road, Slough. Tel: Slough 34511.

"Why I re-joined the CMC salesforce"

Jim King is back selling for the company he left two years ago.

Says Jim "I joined Computer Machinery Company — commonly known as CMC — in the heady, exciting old days of 1970 when we were introducing the brand new concept of processor controlled keying — commonly called key-to-disk — to harassed data prep departments.

"I've an idea those days are about to return to the input market — and I want to be around when they do.

"Then, of course, since I left, CMC has introduced REALITY — a winner if ever there was one. In the words of one user this data management information system is 'as radically different from traditional computer techniques as key-to-disk was from punched cards'.

"I'm a revolutionary and, like all democratic revolutionaries, I work best in a fast changing, quick developing environment.

"Talking about democracy what other computer company has a Worker Director Scheme?"

If you're a successful EDP salesman with a proven record reading this ad then turn to page 27 and learn more about opportunities with CMC.

the mastermind

When the British Library decided to implement BLAISE — the British Library Automated Information Service — they chose RHM to carry out the operation, of their computer and telecommunications service.

Today, we implemented an on-line retrieval system which holds all the Library's information on magnetic tape at RHM's Computer Centre.

From a terminal, users can access information on a variety of scientific subjects in a matter of moments. This

service is now available on a European scale, users in some 10 countries being on-line.

Like the British Library, you can benefit from RHM's experience in computer services; from batch processing to facilities management, from accounting packages to the provision of COM.

Ask your computer manager to phone IAN QUINLAN for further information.

PEOPLE

Mirabito will be Burroughs' chairman

FROM January 1, 1978, the top man at Burroughs will be Paul Mirabito. Already president and chief operating officer, and poised to succeed Ray Macdonald when he retires at the end of the year, Mirabito has now been confirmed as the next chairman, president and chief executive.

Macdonald is the man generally credited with having turned Burroughs round from a scarcely profitable company in 1964 to the most profitable mainframe next to IBM. He will stay on as a director, consultant and adviser. Mirabito has been with Burroughs since 1951.

George Hood-Leeder has joined Burroughs as a senior executive for South-East England. He was previously with British Olivetti's IDP division in a similar position.

Mike Doherty has become sales co-ordinator with Knight Computer Services' software division. He was previously operations manager with Asyst in Saudi Arabia.

Malcolm Biggs, until recently director of computer services at Lowndes-Ajax, has been appointed deputy managing director. The manager of production services, Tudor Ellis, has been made associate director for this operation. Michael Reeve, formerly sales manager, has been promoted to associate director. UK sales, and Lionel Woodcock has joined Lowndes-Ajax as associate director of the newly-formed marketing department. Woodcock was previously director of management services with Franklin Mint.

Cliff Kentish has become manager of special accounts with Applied Computing and Software. He is the immediate past chairman of the IBM Computer Users' Association Management Group and a member of the CUA Council, and was until recently DP and management services manager with stockbrokers Grieson Grant.

Rajesh Chaudhary has joined I. P. Sharp as an ADP consultant. He recently got his BA in computing science at Imperial College, London.

Roger Holdom has been appointed to the new post of director of research and consultancy services at UMIST, the University of Manchester Institute of Science and Technology, effective January 17. He is at present a senior lecturer in microbiology at Strathclyde University.

Graham Herrie, previously a salesman and recruitment consultant with Trident, has become national sales manager with responsibility for all contract staff placements.

Tony Williams has joined Edel the UPS manufacturer as sales and tendering engineer. Formerly he was with Varta.

Derek Proffitt of BOC Datasolve has been promoted from general manager, ICL sector to production director. Gerry Horton previously director, IBM sector, becomes customer service director.

Very Large Databases

PAPERS for the Fourth International Conference on Very Large Databases are invited by the organisers. The conference, which is to be held in West Berlin on September 13-18, 1978, will focus (though not exclusively) on the following areas: database design, database software engineering, distributed database

systems, the impact of new technologies. March 1, 1978 is the deadline for complete papers to be sent to Prof. J. A. Bubenik, Chalmers University of Technology, P.O. Box 402, S-402 22, Göteborg 5, Sweden. Further information from Herbert Weber, Hahn-Meitner Institut, 1 Berlin 38, Postfach 390128.

Chairman for LAMSAC

APPOINTED as the new chairman of the Local Authorities Management Services and Computer Committee is councillor John Kotz, of Hackney Borough Council.

He was previously chairman of the London Boroughs Management Services Committee from 1971 until its merger with LAMSAC in 1975. Elected to the then Metropolitan Borough of Hackney in 1953, councillor Kotz has been chairman of its administration committee since 1971.

Graham Herrie, previously a salesman and recruitment consultant with Trident, has become national sales manager with responsibility for all contract staff placements.

Tony Williams has joined Edel the UPS manufacturer as sales and tendering engineer. Formerly he was with Varta.

Holdom Proffitt Williams Greenhalgh

Colin Greenhalgh, a former electronics salesman operating in Kuwait and the Gulf area, has joined Ferranti, where he will be an export sales executive with the military systems division.

Guy Talbot, general manager of 3M UK's printing, photographic and static control systems division, has been appointed a director.

Alan Fynn has moved to RSC Real Time Control, as UK manager, from Grosvenor where he was point of sale manager.

Mike Chester, former Systems Analyst/programmer, has joined QRS Software as programming manager with responsibility for RISC and Cobol training.

Hungarian program cuts sort time by 70%

AS a by-product of its negotiations with the Hungarian computer industry (CW, March 10), London software house Business and Technical Systems (BTS) has brought to the UK an ICL System 4 sort program, claimed to be very efficient.

The sort was developed at the computer centre for the

Hungarian telecommunications industry. Bata tried it out on selected installations in the UK, and has been rewarded with three orders, one requesting four systems.

One user reported that the sort made 70% saving on both elapsed time and CPU time over ICL's own sort.

Rockwell gets US go-ahead on data encryption chip

From Backy Berna in Washington

ALTHOUGH IBM developed the algorithm for what was adopted earlier this year as the US Federal Data Encryption Standard (FDES, September 15), the Collins division of Rockwell International has developed the first integrated circuit implementation of the standard. After stringent testing, the US National Bureau of Standards (NBS) granted Collins/Rockwell the first validation certificate for an encryption chip that complies with its standard.

The use of federal standards is voluntary, but because the encryption standard offers a high degree of computer security, its use is expected to be widespread throughout the government.

In addition to the standard for protection of computer data during transmission, NBS is developing other standards for applying data encryption to communications and data storage systems, according to Dr Dennis Branstad, NBS project leader for the data encryption standard.

Branstad says other anticipated uses of encryption include personal identification systems and visa validation. Other companies, including IBM, are building data encryption hardware for NBS validation, but so far, Collins/Rockwell has been the only company to submit a circuit for testing.

Successful Prelude

FIRST transmissions of company information via satellite, under the Satellite Business Systems experiment Project Prelude (CWI, September 5), have been successfully completed by Rockwell International, the US aerospace company.

The trial lasted three weeks and Rockwell transmitted computer data, facsimile, voice, and television pictures between Pittsburgh and Seal Beach, California.

Some successful teleconferencing trials were also held. For the data transmissions Rockwell used two Hewlett-Packard 3000 Series II computers and HP terminals and line printers.

The Communications Technology Satellite, jointly owned by NASA and the Canadian government, is being used for Project Prelude, although SBS, a partnership of IBM, Comsat, and Aetna Life, plans to launch its own satellites, possibly via NASA's Space Shuttle.

IDC Europa moves

THE firm that produces a wide range of newsletters, market reports and analysis on the European data processing scene, IDC Europa, has moved its London office from Camden Town to Chiswick. The new address is IDC Europa Ltd, 2 Beth Road, London W4 1LN. Tel: 01-895 9222.

VALUE'S NEW SCHEDULER—A UNIQUE MANAGEMENT TOOL

A major advance in software from the U.S., the Scheduler is a unique concept. It sorts out and schedules all jobs, no matter what their shape or size. It organises them on a time, date, priority and calendar basis. It allows you to develop your schedules up to 62 days ahead. It allows you to forecast the effect of changes in your Data Centre environment. It gives you total control.

Your ability to develop your production job mix efficiently depends upon:

- Source of work
- Time logging of each job
- Interdependence of jobs
- Your moving capabilities
- Job priorities
- Peripheral requirements
- History of previous requirements
- Resource potential

From these factors you can

now shape your scheduling into a smooth production plan.

By establishing your data staging requirements you can now attain maximum use of your joint resources.

With the Scheduler's Status And Revision System - S.T.A.R.S. - a screen display read map shows exactly where any job is at any time - now, then or at any pre-planned time. You not only know where you are, you can see where you're going.

Value's Scheduler sits on the same data base as all other Value systems. It is part of our integrated approach to total Data Centre scheduling and control.

For further information, post the coupon to: VALUE - R.T.Z. COMPUTER SERVICES LIMITED, 103 JERMYN STREET, LONDON, SW1Y 6BB. Or Telephone: (01) 930 4163.

IBM boosts bubble memory density

MEASURING 1/64th of an inch across the parallelogram shaped area in the middle of the picture above is the heart of a radically new IBM bubble memory device that can store 1024 bits at a density of five million bits per square inch. This is about four times the density of bubble memory products currently available, says IBM.

The experimental device was developed at IBM's research lab at San Jose, California, and differs from existing bubble memories in that binary "one" and binary "zero" are represented by two different types of bubble rather than by the presence or absence of a bubble. For this reason bubbles in the new device can be packed more closely together - about 11.5 microns from centre to centre.

The two different types of bubble in the IBM device differ in the magnetic structure of the thin tubular domain walls that surround them.

Like existing bubble memory

devices, the bubbles are propagated in a thin film of crystalline silicon from gates, but they are organized, moved around and read differently.

They are held in a 32 x 32-bit lattice and are read by being shifted column by column to an access channel by magnetic fields set up by gold microelectrodes on top of the film. In existing devices bubbles are organized in looped channels and are moved around by a rotating magnetic field created by a coil magnet surrounding the complete device.

IBM says that experiments with the bubble lattice concept have indicated that it holds promise for storing up to 10 times as much information in a given area as is possible with other types of magnetic devices.

However, conventional bubble memory chips have much higher capacities than the IBM lattice device. The Texas Instruments TMS 0103 used in the T1 765 printer terminal, for example, holds 82K bits (CW, September 15).

Edited by Martin Banks

Brunel study brings Dol funding of Catt projects to £50,000

THE decision by the Advanced Computer Technology Projects Committee of the Department of Industry to fund a one-year feasibility study at Brunel University of a pioneering new computer architecture developed by computer specialist Ivor Catt, brings the total ACP funding of Catt-based projects to about £50,000.

Catt, however, will not be directly involved in the Brunel study, and has been given a small retainer to act as a consultant on the project. It is understood that there has been growing US interest in the development.

With £20,000 behind it, the Brunel study will be used to evaluate the new architecture, called Property IA, which is based on the premise that actual computer processing can be carried out in a memory system, doing away with the need for a central processor in computer systems.

Under the leadership of Mike

Lea at Brunel, researchers will consider the use of the architecture to handle one processing technique, data compression.

The other £30,000 from ACP is being used to develop a hardware system known as a Computer Associative Module (CAM) on which Property IA can operate. Based at Middlesex Polytechnic, the project has been running for more than two years.

The two projects represent a radical departure from conventional thinking on computer construction which Catt has referred to as "a Chinese copy of the Von Neumann machine" (CW, November 3) with its separate processor, memory and assorted peripherals. CAM and Property IA offer an entirely different approach.

With CAM, computer hardware would become based on an array of complete semiconductor wafers that would require none of the complex testing, chip separation and encapsulation processes currently required in semiconductor production. In operation, the wafer would become a self-organising, 128K bit serial shift register. This would be achieved by a simple, external logic function instructing one of the chips diffused into the wafer to search the chips that immediately surround it for a good device. When found, the process would be repeated from that good chip until a chain of 128 chips had been interconnected. This process would be initiated each time the system was switched on, and would take an estimated five minutes to produce the required capacity.

Its main advantage would be that semiconductor manufacturers would no longer have to use the expensive post-diffusion production processes currently required and would no longer have to carry the costs of separating out the good chips from the bad. By organising itself to bypass bad chips on a wafer, CAM offers the potential to reduce system hardware costs

very considerably.

Breadboard prototypes have already proved the viability of the technique, and the work at Middlesex is now geared towards designing and producing an integrated version.

Property IA architecture is loosely based upon the "active" mode of operation of old mercury delay line memories, common in the late fifties. Here, data words were rotated around the delay line, and Property IA utilises this concept to create a memory system that allows direct data manipulation to be achieved. Although it applies to a variety of hardware configurations, its application to the CAM hardware is expected to bring dramatic cost and performance improvements over conventional computer technology.

EAROM prices cut by 60%

PRICE reductions of up to 60% on some devices in the range of EAROMs have been made by General Instrument Microelectronics, stemming from production economies realised from volume manufacturing.

The 1K, block address 11105 will now be £5.85 and the 4K, word address ER 2401 will cost £7.12.

These devices combine volatile data storage for up to 11 years with the facility to store data at any time. The company is introducing two improved versions of existing memories. Replacing the 1K, block address ER 2080 is the ER 2081, offering an improved read access time of 2 microseconds. It sells for £7.35.

The 2K by 4 bit ER 2401, superseded by the ER 2402, which offers an improved access time of 1.5 microseconds. This part will sell for £11.35.

Racal goes into ATE market—with £2m worth of orders

THE Racal Group has decided to take the automatic test equipment built by the horns with the announcement of the formation of a new subsidiary company, Racal Automation. It brings an initial boost of £2 million to the group's forecast of £200 million turnover for the current year, and new managing director John Engledew says the new company should be soon a major contributor to the group.

Racal became involved in ATE, as a user, through its Clansman military radio equipment, and has absorbed considerable experience in the field. The new company is heavily based on the original personnel who worked on the Clansman ATE equipment at Racal BCC.

As a licensee into the ATE market, however, Engledew is convinced that Racal Automation has been able to take advantage of the latest state of the art technology in realising its product line.

The new equipment has certainly met with early successes. Sales have been made to the Ministry of Defence (Procurement Executive), Pye Telecommunications, and the Communications Division of Plessey.

Although the initial product range consists of six ATE sys-

tems, there is believed to be some significance in the choice of Racal Automation rather than Racal ATE as a company name, though it could be some time before that significance appears.

The product line has been given the "family" name of Rebat, and includes two systems aimed specifically at the direct testing of electronic components and subsystems for electrical and functional performance. Two further systems are included that offer Computer-Aided Fault Finding (CAFF), which can be applied to any situation where a logical, fault finding routine can be followed.

With a price of around £50,000, RTL 1 is designed to provide high speed testing of assembled printed circuit boards in both base workshops and factories. It employs the traditional "bed of nails" approach to component electrical testing but has overcome the main failing of such systems — failure for the "nail" to make contact, thus failing a good component — by utilising a software routine that checks all pins for open circuits.

RTL 4 is the most advanced system in the range, covering both component and subsystem function testing. It incorporates a technique known as parallel activity for simultaneous mul-

tiplex parameter testing to reduce testing timescales, and the system is capable of operating up to 625 peripheral devices.

The two CAFF systems form a complementary pair of fault finding systems. Called CAFF 5 and CAFF 5M, they consist of a Computer Automation LSI 2&10 minicomputer-based system (CAFF 5) and a Motorola 6800 microprocessor-based machine. In operation, the systems provide the user with a plain English description of the fault finding procedure for the equipment under test on a video terminal. Operator interaction with the system is kept to a minimum to allow use by unskilled labour.

CAFF 5, although it can be used as a test station, is primarily intended as a program development station for the CAFF 5M, which is specifically designed for operation in remote locations. Once developed, the programs are loaded onto floppy disc storage for use with the 5M system.

This ruggedised version of Micro-CAFF RTLM, a unique computer-aided fault finding system, has been specifically developed by Racal Automation for use in military field workshops.

VME/K users set up group

USERS of the VME/K operating system on ICL 2900 computers have formed their own user group within the ICL Computer Users' Association. The group, chaired by Dr Brinn Spratt, director of the Kent University computing laboratory, had its first meeting at the end of last month, when 20 users discussed their experiences of VME/K.

The group hopes that ICL will give members detailed presentations on VME/K development, compatibility with VME/AB, and networking.

Jim Gough of Vickers Management Service was elected vice-chairman. Committee members are Ted Abram of Vestric, a wholesale pharmaceutical firm, Andrew Kettler from the regional computing centre at Edinburgh University, and Richard Thompson from the Huron Computer.

VME/K users and potential users interested in membership should contact Dr Spratt on 0227 68822, extension 627, or Peter Booth of ICL on 01-788 7272, extension 4251.

State of the art of distributed processing

DISTRIBUTED processing in its various forms is the subject of a State of the Art Report now available from Infotech. It comes in two volumes. The first is devoted to defining and discussing the main ingredients of distributed processing, including the technological, economic and organisational factors, and the second is a collection, of invited papers on the subject.

Contributors include David Butler, chairman of the Butler, Cox and Partners consultancy, who presents four examples of distributed processing as put into practice by three European organisations.

Anthony Bristow, marketing vice-president with CMC, discusses the relative benefits of distributed processing for the user department and the central management services group.

Different ways of distributing databases are outlined in a paper from one of several US contributors, Grace Booth from Honeywell in Phoenix, Arizona.

Elements in Futuredata's Microsystem range.

Futuredata introduces four new development systems

FOUR new Zilog Z-80 based microcomputer development systems, introduced by the Futuredata Computer Corporation of Los Angeles, offer the additional facilities of extended Basic, a Basic Compiler, a word processing package and RDOS, a disc operating system with relocatable macro assembler and lineage editor.

The range, called Microsystem, consists of two cassette tape and two floppy disc equipped systems, each of which comes with up to 58K bytes of memory, video display, ASCII

keyboard, the disc or tape drive unit and operating system software. Optional plug-in modules are also available to permit the systems to be converted to 8080 or 8085 processors.

The systems feature one parallel and two serial I/O ports, real time clock, PROM bootstrapper, eight-level vectored interrupt, and a DMA capability. The disc and tape operating systems include monitor, debugger, editor, assembler and copying utilities.

US prices for the range extend from \$4,325 to \$7,875.

MICROSYSTEMS '78

SEMINAR & EXHIBITION
West Centre Hotel, London
February 8-9-10 1978

Sponsored and organised by IPC Business Press

Keeping in touch with a fast developing technology like microelectronics can be difficult. And, like jumping on a moving train, the initial contact can be hazardous, if not actually painful.

That's why a unique line-up of IPC Business Press journals have got together. To organise three days of talks and presentations plus an exhibition which will give you a chance to come to grips with the new technology of microsystems.

That means not just microprocessors, but also interfaces, peripherals and software. Everything, in fact which is needed to transform a microprocessor into an operational system.

So climb on board Microsystems '78. To learn more about the world's fastest moving technology. Without being thrown off balance or having the doors slammed in your face.

We can think of lots of reasons why you should attend Microsystems '78. But we'll give you just eight of them.

Electronics Weekly
COMPUTER WEEKLY data processing
microprocessors
Electrical Times
ELECTRON wireless world
electrical review

All top journals in their fields and all sponsors of Microsystems '78. Need we say more? Except please complete and return the coupon.

I am interested in Microsystems '78.

Please send me details of the seminar programme, when it is held.

I would like to submit a paper to be delivered at Microsystems '78.

My company is interested in participating in Microsystems '78 as an exhibitor.

My company would like to make an industry presentation at Microsystems '78.

Please tick the appropriate box.

For use in high temperatures

A RANGE of microprocessor hardware is now available from Motorola. Semiconductor specifically designed for use in high ambient temperatures and severe temperature gradients. Capable of sustained operation over a temperature range of -55°C to +125°C, the range consists of the MCM8800 MTL processor, MCM8810 MTL 128 by 8 bit static RAM, MCM8820 MTL peripheral interface adaptor, and the MCM8850 MTL asynchronous communications interface adaptor.

Plenty of memories

DESPITE the surge in demand for static memory components, Cramer Electronics has accumulated a considerable inventory of the recently introduced Zilog 4K static RAM, as well as the 16K dynamic device.

Five versions of the 4K part are available, each offering different access/cycle times, while three versions of the 16K dynamic memory are being stocked, offering access times of 160, 200 and 250 nanoseconds.

Data Communications Diagnostic and Dialogue

TC 100P

The new Dynatech TC-100 is a microprogrammed data communications test set for use in tech control systems or as a portable testing device. Its unique design allows it to perform a wide range of troubleshooting duties, to locate and define faults that may develop in today's modern data communications systems. It simulates and tests software and hardware components of the communications network.

- Bit error rate performance.
- Measurements of system behaviour.
- Remote control switching.
- Polling and selection.
- Message trapping and display.
- Link protocol checkout.
- Control signal breakout.

OP SPOT By Bernard Allen

Hazards of the computer room

THE computer room is a potentially hazardous environment. It is often hectic and houses a vast collection of sophisticated electrical equipment which requires a high standard of maintenance and operation.

Yet the level of danger can be decreased and almost entirely eliminated when the DP manager (or whoever is responsible) plans the layout of the installation and defines the role of operations staff.

For their part, operations staff should be fully aware of their responsibilities for safety, and first consideration should be given to the prevention of fire, with efficient means of fire-fighting immediately available.

The computer room and all associated areas should be fitted with an automatic fire alarm of the smoke-sensitive type, with the control panel in the computer room or near security guards so that it can be promptly seen. Remote signalling to the fire brigade can be incorporated into such systems.

Many installations operate the computer on a 24-hour basis and often it is felt that the staff can deal with fire. In such a situation it should be remembered that fire can occur in almost any area and extinguishers should be placed at strategic points.

Regular fire-drills, though often tedious, are necessary as is the training of one or more members of each shift in the handling of the various forms of equipment.

Several of the staff should be

fully trained in first-aid and a comprehensive first-aid kit should be provided. A room with a bed is also desirable, so that should a member of staff be taken seriously ill he or she can be tended in comfort.

Considerable training should also be given to operators in the use of peripherals, for in this area negligence is a prime cause of accidents.

It is important that the operations manager should clearly define the extent to which his operators should clean the equipment. In most installations this is the responsibility of trainees. Yet to what extent can they be expected to perform such a function?

It is imperative that all equipment in the computer room is in good working condition, or put out of service.

Should an operator discover that a unit is in some way impaired he must report it immediately through the appropriate channel. And if the engineers do not respond promptly, it is the duty of the operations manager to complain to the person concerned or to the supplier.

In some cases the malfunction of equipment can have a detrimental effect on the operator's health over a period, rather than immediately. When the lid of a printer will not close, the noise is quite considerable and could lead to noise fatigue.

Above all, an operator should never be left in the computer room unaccompanied, and all staff should periodically be reminded of the need for concern.

DIGITAL OEM NEWS

WE CAN DELIVER FASTER. FOR LESS.

Digital Equipment has added over 27 million square feet more space in eighteen months. 60% more capability!

So we can deliver the whole range of OEM equipment — from basic PDP-8 up to the PDP-11/70 — faster for lower cost. Get in touch early — it's time you had some good news, isn't it?

Be there first

On a whistle-stop European tour last week to talk to customers, Dr Gene Amdahl spent 24 hours in the UK. He addressed a group of investment analysts, visited potential users—and still managed to find time to give Computer Weekly an exclusive interview. Here he talks to TIM PALMER about a common world software standard, possible future plans for IBM, Amdahl Corp's investment plans, and the value of the Japanese connection.....

THE community of computer users could and should demand a single software standard from all the manufacturers.

That is the view of Dr Gene Amdahl, founder and chairman of Amdahl Corp.

"Users have no alternative but to convert back to a de facto standard, sad as that may be. It is not reasonable to insist on the ideal—no-one knows what the ideal is," he said.

"It is equally unreasonable to insist that one should not follow the path that is available just because it is not ideal."

That path is clearly along the IBM operating software path—and for most large system users that means MVS.

"About 30% of our users are running MVS, and some have converted to it after installing their 470 with some other IBM operating system. But by this time next year, I anticipate that 70% of our users will be running MVS."

Amdahl believes that MVS is the main IBM operating system for the foreseeable future.

"If MVS does not last for a reasonable time, IBM will have made a very large investment for nothing," he commented.

"Most of the pressure to get rid of the earlier IBM operating systems is coming from IBM. It would be nice if we did not have

"To ask whether any of the earlier operating systems should survive is like asking if England should survive. Things do become obsolete, but different users achieve different things with the same operating system."

to support all the earlier IBM operating systems, but it is our users' interests, not our own, that we have to serve.

"To ask whether any of the earlier operating systems should survive is like asking if England should survive. Things do become obsolete, but different users achieve different things with the same operating system. One user may be doing things with an old operating system that others who have upgraded it off a year before thought impossible.

"We have said that we will support the old operating systems for at least a year after IBM stops support.

"We will also continue to add to the last version of MVS in the public domain, so that our users continue to have available to them all the facilities offered by IBM, although not necessarily in the same way."

Amdahl had some chilling words for the non-IBM manufacturers.

"Univac and Honeywell are in a very difficult position. How to get from where they are to where they have to be is a most challenging problem. They have to follow the path we have taken, they have to serve their base as well."

"I really don't want to be in their shoes, but I'm not bleeding

Amdahl calls for a single software standard from all manufacturers

Gene Amdahl... chilling words for the non-IBM manufacturers.

for them. They got themselves into the position they're in.

"Burroughs is different in that it is the only one offering a philosophically different machine. It has some specific advantages and there is psychological attractiveness elsewhere. Burroughs has demonstrated that it has the most interesting competitive machine to IBM, but in the long term I don't believe it is viable. There is less room for one alternative to IBM than there is for 20."

On Univac's 370 emulation facility for the 90/80, Amdahl commented that it was not necessarily an advantage or a disadvantage.

"If Univac is getting its users to run IBM software on the machine, then it is an advantage. Otherwise I think they're making a mistake."

Dr Amdahl is proud of his son's involvement in Magnuson Systems, a new company which plans to attack the lower end of the 370 line with plug-compatible alternatives.

"It is the most creative advance in small end computer design for a very long time. I admire what he has done very much. It's more than creditable, it's magnificent."

Amdahl, unlike many in industry observers, is not impressed by the 3030 series from IBM.

"It was a Herculean undertaking to do what they have done in the time. But they have spent long enough dithering around with old technologies; there must be something they can do to improve the situation in the next generation."

But he is not impressed with the approach that IBM is taking to competition.

"They seem to be putting more effort into trying to place stumbling blocks in the way of the competition rather than serving the best interests of customers. Most people think that the best way to meet competition is to serve the needs of your customers, and I'm surprised IBM doesn't see it that way."

"The next generation from IBM, possibly known as the H-series, and complementary to the bottom-end E-series, is thought likely to appear in 1979, and Amdahl does not dissent from this view. He told securities analysts in London on Friday that the pace of technological advance was speeding up and that the industry was now on a three-year rather than an eight-year technology cycle.

"The price cuts were designed to kill off the opposition, but there was a paucity of alternatives for IBM."

"But IBM is going to have to find some new area to concentrate on if it is to maintain its gross margins of 28%."

The advance of technology will make it impossible to maintain those margins in its present market areas. I expect them to move to the automated office, as 50% or more of the workforce is now employed in offices rather than manufacturing, and the only

"IBM is going to have to find some new area to concentrate on if it is to maintain its gross margin of 28%. The advance of technology will make it impossible to maintain those margins in its present market areas."

way to improve productivity there is to improve the productivity of the employees."

Amdahl does not believe that his company has done IBM's business any harm at all.

"We haven't prevented IBM delivering a single machine; the company's daily income has not been altered at all."

Nevertheless, he told the analysts that in the sector of the market where Amdahl competes with IBM, he estimated that IBM's output was only four or five times that of Amdahl.

Despite the fact that the 470V/5 is a direct competitor for the 3032, Amdahl does not plan to introduce a V/4 to match the 3031.

"I think we are in the optimal sector of the market right now. In five years' time we could have extended down into a lower performance range, but at present we are serving the only portion of the market I believe it right for us to be in."

Although US reports have suggested that non-IBM users are interested in IBM's IPARS operating system and software, Amdahl has not detected the "hype" that he commented that it is the only system for any

reservation application.

"We do have one user: American Airlines, which originally did not intend to use our machine for reservations has decided that it really is reliable enough."

The biggest customer by far is AT&T, which Amdahl says is still taking about 20% of the company's machines. With over 80 now installed, that means that AT&T has 16 or 17.

In Europe, a French subsidiary is likely to be established next year.

As for Amdahl's direct competitors, Intel with the AS series, Control Data with the Omega, and several others preparing to enter the market, Amdahl is not at all dismissive of them.

"As a citizen of the US I welcome them; they represent the free enterprise system. As a citizen of the world I welcome them as being in the best interests of the world. As a businessman I find them somewhat discomfiting. But I don't dislodge them just because they are doing something different from us. Implementing 370 architecture in newer technology rather than designing completely new machines to run IBM software."

One of the headaches affecting Amdahl is the availability of memory chips.

"16K-bit memory chips are not available in the quantities we want, and even 4K chips cannot be supplied to meet our needs. We are having to ration our users, give them 85 cents in the dollar, a pound instead of a guinea."

With cash flowing into Amdahl's coffers from the machines the company is now shipping, 90% of which are sold, where does he intend to invest the money?

"We have a long way to go to match our principal competitor's cash hoard," he grinned. "We have to accumulate cash just for our needs and for the possible requirements of our next product announcements."

"We are offering leases, and not many have been taken yet, but if that changed, the cash position would alter very quickly."

"Cash is essential for investment, and we would like to be in a position where our cash is adequate, wherever we need it."

"We have no particular interest in acquiring peripheral manufacturers at present. There are plenty of companies making plug-compatible peripherals and they are in healthy competition."

peripheral manufacturer.

"However, if that situation changed and there were a shortage of competitive companies we might have to move into the market."

Several commentators have suggested that if IBM does succeed in locking Amdahl users out of the latest releases of its operating software, Amdahl could always take up the Fujitsu OS4 FIV operating system, which is designed to be fully comparable to MVS, and reported to be performing 10% above target in early installations.

"We have the rights to use OPM leasing in New York about 370 plug-compatible CPUs (see December 1).

"It has to be either Fujitsu or Hitachi," he commented.

He was a little hurt at a comment about him attributed to Dr Robert Noyce, co-founder of Intel, which appeared in an interview in the French Press. Asked what he thought of Amdahl, Noyce was quoted as having said he did not think much.

Is your installation properly protected against the potentially irreparable losses following fire? The odds are again on a negative answer, since only three per cent of sites recently interviewed use a fireproof strong room and only 10% a fire detection system.

Lack of security is next. There are plenty of people who take things that do not belong to them and industrial espionage makes stealing sound almost romantic. If that does not worry you, then how about a malicious ex-employee or a member of the public with a grievance against computers? Most favoured security devices are "special locks," but even they are used in only 30% of installations.

So few computer installations shied their computer output for security that the sample taken was considered by IDC Europa researchers to be "so small" as to be untrustworthy.

And yet, if your old punch cards, tape and printout paper are not worth destroying for confidentiality then surely it is a positive move for ecology. Indeed, paper can have a commercial as well as sociological value when saved for re-cycling.

If a malicious thief breaking in during a power cut and setting

fire to your computer sounds like a risk you are prepared to run, then are you among the 45% of the sites who use devices or services for the cleaning of magnetic tapes and discs? How can it be so low when we all know of the dangers inherent in the corruption of data?

And, where are the precious tapes and discs kept? Mostly on racks and shelves with only 46% in cabinets and 37% in a safe.

But, if we get on to environmental content in any detail, one might seriously question the soundness of mind existing within the UK computer industry.

Can I be accused of being a prophet of doom—or worse profiteering from doom? Since the statistics quoted come from IDC Europa research, I admit in the affirmative to both these points.

Thousands of people recently attended Compec, a superb exhibition for the computer industry, but what do they remember it for? Minicomputers, peripherals, high-speed printers, microprocessors, graphics; but what about fire extinguishers, prevention and warning equipment? How about standby power generators? Did you check out on the latest magnetic media cleaners and inspectors, cabinets, trolleys, air conditioning, heating and humidity controllers, vending machines and background music, etc?

If you, as a user, feel I am giving you a hard time, what about the suppliers?

What do computer salesmen mean when they talk of "normal office environment"? A normal office in, say, New York, has to cope with polluted air that may be more humid or dry, hot or cold than any DP manager from Wigan to Worthing can imagine. Unless he has experienced it. Consequently, a normal New York office may be controlled

between 50 and 55 per cent relative humidity, and 18 to 24 degrees Centigrade. With nur more temperate climate our normal office environment is often less than perfect a condition for electronic data processing equipment.

Do computer salesmen adequately describe the full implication of the installation of data processing equipment, especially to the first time user market? Probably not, but they are human beings toiling in an imperfect world and invariably competing with the mind's-eye picture of a computer working in a normal office environment and using the shelves and filing saved by doing away with the redundant paperwork.

Fire, theft, storage, power cuts and environmental control are all, or should be, in the long run matters related to the material side of a company's business. Now what about us humans?

While concern is being expressed about the effect of VDUs on operators' eyesight, a survey is being conducted into the effects of prolonged viewing of terminal screens. Let us hope that no negative conclusions are drawn—partly, of course, because of the health and happiness of operators, but partly because of the effects on data processing, the re-negotiated terms and conditions and the industrial compensation, etc. It does bear thinking about.

While on the subject of industrial injury, have you felt a twinge in the back when you should be using a stationary trolley or bruised yourself on a sharp edged desk or slipped from a chair while changing a lighting tube?

The British Standards Institute, in collaboration with BETA and the Furniture Industry Research Association, has produced BS5459 which has done much to establish criteria that will boost the reputation of British office furniture in both domestic and export markets. This seems to me a positive and an acceptable step in the right direction towards improved conditions of data processing. But I am not so sure about recent legislation in West Germany which will shortly provide for the possible implementation of data security officers following thefts of personal or business information from computer sites.

Think into consideration the low cost per employee per day and weigh it against the potential improvement in quality of life and staff relations; then how can you not look seriously at flexible working hour systems, air conditioning and background music, etc, especially for those without whom the most expensive processor will not perform the data preparation needed?

I believe the standard of British data processing management to be as high as anywhere in the world. However, to avoid complacency I should like to think

ACCESSORIES AND ANCILLARIES

Data processing without due care and attention

By Roger Frampton

The efficient running of a computer department and the effective use of computer output depends to a great extent on the adequacy of the ancillary equipment. Paper supplies, the security system, cleaning equipment, etc, are all small but vital factors in machine room housekeeping.

John Dribble, drawing on his experience, explains the importance of efficient cleaning services, and Bernard Allan reminds us not to forget the operators who have to use the equipment.

In this opening article, Roger Frampton, managing director of IDC Europa, suggests that only about five per cent of DP managers have taken proper care of their installations.

So few computer installations shied their computer output for security that the sample taken was considered by IDC Europa researchers to be "so small" as to be untrustworthy.

And yet, if your old punch cards, tape and printout paper are not worth destroying for confidentiality then surely it is a positive move for ecology. Indeed, paper can have a commercial as well as sociological value when saved for re-cycling.

If a malicious thief breaking in during a power cut and setting

THERE are of course lies, "other sorts of" lies and statistics according to whoever it was and generations of plagiarists since. For those of us in the UK computer industry, the statistics are most likely to come from IDC Europa, whose figures, if contorted, can be made to show that management from less than five % of UK computer installations qualify to stop reading this article now.

Take a few moments to answer some questions honestly—not how would you save yourself from embarrassment at management interrogation—but the honest truth.

Could you cope with your data processing schedules in the face of a prolonged series of irregular power cuts? If the answer is no, don't feel too bad, because probably two-thirds of UK installations, due to the lack of standby power supplies, could not do so either.

Is your installation properly protected against the potentially irreparable losses following fire? The odds are again on a negative answer, since only three per cent of sites recently interviewed use a fireproof strong room and only 10% a fire detection system.

Lack of security is next. There are plenty of people who take things that do not belong to them and industrial espionage makes stealing sound almost romantic. If that does not worry you, then how about a malicious ex-employee or a member of the public with a grievance against computers? Most favoured security devices are "special locks," but even they are used in only 30% of installations.

Bid for share listing

APPLICATION for a listing of its shares on the American Stock Exchange is being considered by Amdahl Corp. Amdahl shares are at present traded "over the counter" and are not listed on any exchange. "Over the counter" shares are based on the last transaction reported by the US National Association of Securities Dealers.

The shares in a company are much easier to trade when they are listed on an exchange and as a result tend to be held by a greater number of shareholders than they would otherwise be. This in turn makes it easier for a company to raise new capital for expansion. Since each shareholder is required to pay less of the total required

Wanted: better contact and liaison with users

By John Dibble

IGNORANCE is certainly not bliss where computer cleaning is concerned. Taking the cleaning of the computer installation for granted is still, unfortunately, all too common. Providing the cleaning operation is reasonably smooth — rubbish is duly dumped, cups cleared and the floor more or less polished — then computer management often have well alone.

The fact that cleaners and installation management seldom

meet puts a large degree of responsibility on specialist cleaning organisations. Points of contact are, at the best, remote and at the worst, barely discernible. A scribbled punch-card message strategically placed where the DPM's secretary hopes the cleaner will take note and change the washroom towels, is a common communication method. Similar procedures are adopted when a new anti-static mat for the tape library is

required.

A cleaner's life is by no means a happy one. It is not unknown for a cleaning team to arrive on site during the harassment of a complete refurbishment or equipment upgrade. No one had thought to warn the cleaners of the impending activity — nor the subsequent requirement to make good the floor areas revealed by the change round.

There is no doubt that for their part, cleaning operatives

This is probably what it looks like underneath your computer room floor, and it's here that dust and dirt can collect if

effective cleaning routines are not established. This spot installation is at IBM Cosham.

would welcome a channel of communication — providing space can be found between the mounds of stacked stationery besiding corridors and store rooms. Working within strict constraints that on no account should equipment or materials be disturbed, the area of cleaning activity often becomes limited. Disc packs are left on the computer room floor while piles of print-outs are spread over all working surfaces. Should one single sheet, however, be mislaid, there is no doubt that the cleaners will get the blame.

Not all blame, of course, necessarily rests on the installation team. There are still many cleaning organisations which, given the opportunity, could well spread alarm, despondency, — not to mention water — into any installation. The time really is ripe for computer cleaning to be recognised as a skill to be undertaken only by qualified organisations.

Getting what you pay for is very true in most walks of life. But in the case of computer cleaning, the ultimate price paid could well be very high. For many cleaning companies, keeping up with techniques is a non-starter.

HONEYWELL and UNIVAC displays. Includes Line Monitor for affiant system de-bugging and troubleshooting.

DELTA 4300

Our Text Processing terminal which includes automatic Ragged Right justification, powerful search and replace facilities and up to 8.5K characters of display memory in its comprehensive features list.

DELTA 4500

Full user programmability makes the 4500 ideal for "intelligent" terminal applications and for the development of customised display programs.

DELTA 4700

Our floppy disc-based terminal system which gives total flexibility for information retrieval and word processing applications. Up to 1.5Mb of local storage all packaged in an attractive workstation.

Whatever your application, DELTA have a display system to suit you

DELTA 4000

Our standard terminal which gives you full editing facilities, paging, synch/asynch transmission and programmable function keys within the long list of standard features.

DELTA 4050

The data communications terminal designed for multi-drop networks. Proven replacements for BURROUGHS.

What good design can do for efficient running

By Bernard Allen

PICTURE the computer room of the future on a typical evening shift.

The specially designed lighting system is dimmed as a group of operators dance upon the anti-static carpet tiles to the pulsating beat emitted from the newly acquired piped-music system.

They pause occasionally to mount a tape or disc and often make a swift trip to the store room because a printer had run out of stationery.

Their frequent journeys to the store room are enjoyable. They can, for instance, admire the way in which the room is decorated with the tasteful and scientifically-tested wallpaper and paint. They can also discuss the culinary delights being prepared in the oven in the operators' rest room.

It took, for instance, Corbett Cleaning three and a half weeks to bring the new IBM installation at Cosham up to operational standard. During this period, the cleaning team took up residence in mobile caravans. Care and attention at this point in installation time, pays dividends — all the way along the subsequent cleaning and operating life.

Dust and brick particles are a particular threat to new installations. These items have a nasty habit of turning up on the DP scene after a period of several months, resulting in considerable problems. One installation was so plagued by floating debris that the complete operation had to close down while the air conditioning trunking was stripped. At the same time all discs and tapes had to be checked and cleared. An expensive exercise both in time and money.

Misunderstanding still seems to prevail in the cleaning working area. No specialist cleaning company, for a start, would contemplate the use of water or dusts anywhere near the computer hardware. The average computer engineer would justifiably go berserk if he saw a tank of water being carried into the computer room for floor cleaning purposes. Dry foam cleaning is the only approved method for carpet tiles while dry cleaning is suitable for PVC tiles.

Even so, this message has yet to filter through to such bodies as the British Institute of Cleaning Science and Guild of Cleaners. Its current publication for cleaning computer accommodation only goes as far as suggesting that "the use of water for cleaning in the computer room shall be kept to a minimum."

Danger spots include the storing in the computer room of cardboard boxes. Such items are noted for spreading dust and pollution in all directions. Highly polished surfaces are also a hazard — not just to life and limb. The build-up of emulsion polish could well take over a year to remove. Once again, dry cleaning is the only practical method of keeping floors in shape. Limiting the number of personnel allowed in the computer room is sound advice and so the environmental pollution should be kept to a strict minimum.

Perhaps the key to cleaning satisfaction is in the way of liaison and contact. Cleaners should be responsible to the computer management, not the office manager. The latter's authority should be limited directly between the cleaning team leader and DP management.

Trust and responsibility accepted work methods cleaning teams should be able to take the initiative in the management of the computer room. The latter should be able to rely on the cleaning team leader and DP management.

Corbett cleaning team is equipped with a working kit which includes: Spot removal, carpet cleaning, floor maintenance, floor polishing, floor

tending the peripherals.

Magnetic wall charts have many applications both in the computer room and the other related sections. They can be used for scheduling work for the coming week and also to record any system resources which may be unavailable due to maintenance, etc.

Other charts used in the computer room are those which monitor the humidity and temperature and so provide the staff with a method of keeping a close watch on any significant variations. These are often linked to an alarm which is activated should the temperature or humidity vary outside specified limitations.

Such early warning systems are of great value as the operators can contact the air conditioning engineer and so prevent unnecessary downtime.

With faulty air conditioning systems the fire hazard is extremely high and the prevention of this in the computer room is of paramount importance.

Operations staff have to live with the decisions of DP management; and those decisions do not always make the operator's life any easier. Bernard Allen takes an operator's view of the role of accessories and ancillaries and discusses how vital it can be to the efficient running of a computer room.

Both the local police and fire brigade headquarters should be informed of the presence of a computer complex, and their advice should be actively sought. Further information can be acquired by referring to Fire Protection for Electronic Data Processing Installations, published by the British Standards Institution, 101 Pentonville Road, London N1 8ND.

Automatic extinguishing systems of the smoke detection kind are widely used throughout the industry. Also, there are many types of equipment intended for manual use, each of which has a specific application relating to the cause of the fire.

In this respect it is imperative that several of the operational staff are fully trained in the use of fire fighting equipment, and that all are aware of the methods of fire prevention. Strict regulations and fire drills at four in the morning may seem tedious, but are vital to the less for the wellbeing of all.

This hazard again stresses the need to use shelving equipment in an appropriate manner. At one installation, for example,

printed output was stacked near the fire exit, thus blocking the intended route of escape. Fortunately it was discovered by the fire officer and the situation rectified.

A fireproof safe is an asset to a company, and is particularly valuable to the computer department. It can be used for the storage of back-up tapes and can be placed near the computer, which would relieve the operator of the tedium of transporting the tapes to and from the computer room.

The security of an installation is worth consideration during the planning stages and diligence in its day-to-day running.

ing is particularly so during the evening and night shifts when an installation will be vacant apart from the operations staff.

All installations enforce security procedures to some extent, using one or a combination of methods. The reception of most installations is manned by security guards and the degree to which company employees and visitors are vetted depends on the importance of the firm attaches to it.

A common method is to issue all staff with security badges or passes which usually include a photograph, the person's grade or position in the company and are signed by the employee.

Some companies employ systems intended to permit only operations staff to enter the computer room. In such cases the operators are issued with a card or a key which automatically activates the entrance to the computer room. The various devices available, of course, are useful only if used in the correct manner.

The level of security maintained in an installation and, specifically, to the computer room depends to a great extent on the attitude of the personnel.

An important factor affecting the attitude of the operator to his work is the provision of a

comfortable rest room and facilities for the storage, preparation and cooking of meals during the evening and night shifts.

Micro-wave ovens provide a quick method of heating food, so that meals can be prepared and cooked during the day and reheated when required.

Such equipment is beneficial to the company as well as the personnel.

In the short term, the staff are less inclined to visit the local every evening, and in the long term, it restricts the labour turnover, which is often related to the concern accorded to the welfare of the staff.

You won't find a better family of printers for the price. It's that simple.

The New Centronics 700 Series.

Now, the features that make our model 700 the best in the low price range of serial printers are available in a family of seven models: uncomplicated modular construction; the reliability of fewer moving parts; high parts commonality; and low price. All of which means a lower cost of ownership.

The new 700 family covers a full range of serial printer requirements: 80- and 132-column format; 60 to 180 cps speed range; bi-directional and logic-seeking operations; and 110-300 baud KSR and RO teleprinters.

Like all Centronics printers, the 700 family is better because we back them with a wide choice of customizing options and accessories. More than 100 sales and service locations worldwide. Centronics' financial stability, and dependability proven by more than 80,000 printers installed.

Simplicity of design, full range capabilities and better back-up make our 700 series printers simply better. European HQ: Centronics Data Computer (U.K.) Ltd., Peterborough House, Harrington Road, London SW7 3HA. Tel: 01-581 1011, Telex: 8921973, Offices in Frankfurt and Paris.

ACCESSORIES AND ANCILLARIES

How to keep going during power cuts

NOW available from Modular Power are two power units, one being an AC supply interrupter and the other a DC load type.

Designed as a method of simulating mains supply interruptions, the AC supply interrupter is ideal for checking the hold-up times of power supply units and electromechanical device release times, said Modular Power.

There are two operating modes available: switched and manual. In the switched mode, the unit continuously interrupts the supply to the equipment under test, from 1/2 to 2 1/2 cycles in 1/2 cycle steps, depending on the setting of the "off" time control. The rate of interruption can also be pre-set on the front panel.

In manual mode, the interrupt period is from 1/2 to 7 cycles in 1/2 cycle steps, again using the front panel control.

In either mode, the interrupter will operate from 100 to 250 volts AC, 50 to 70 Hz (factory set) at

a maximum of 10 amps rms.

Designed to handle DC loads up to 45 amps, the Type 4334 can be controlled in either of two modes, said Modular Power. These are from its own front panel or from a remote source such as an automatic test installation.

Applied voltage can be up to 30 volts, depending upon the choice of one of three possible ranges. Range one is for operating voltages of two to nine volts, 0.45 amps; range two is for two to 18 volts, 0 to 22 amps; and range three is for two to 30 volts, 0 to 14 amps.

The maximum wattage is 405 watts on ranges one and two with 420 watts on range three. This one can be set at the factory within these maximum parameters: 420 watts, 45 amps and 40 volts.

An eight-line binary code can be used for automatically programming the Type 4334 in 1/4-amp steps from 0 to 45 amps. A further two lines are available

for load on/off control and for zero volts. Standard TTL voltage levels can be used for auto programming.

Modular Power Ltd (CW), 28 Sun Street, Waltham Abbey, Essex. Tel. Lea Valley (0892) 711922.

Battery packs

USERS of Sweda 250, 350 and 450 electronic cash registers can now obtain back-up battery power packs from the makers.

The changeover from mains to battery operation is automatic following a power failure. When the mains supply is restored, the battery is automatically recharged, whether the cash register is switched on or off. The unit needs no maintenance and its overall dimensions are 370 x 180 x 185 mm (14 1/4 x 6 3/4 x 7 1/4 inches).

Sweda International (CW), 27 Goswell Road, London, EC1M 7AL. Tel. 01-253 3090.

The Lenaman Mark 5 portable microfiche reader from Microscot, is designed for educational, scientific and library use. It can also be used as a wall projector.

Portable fiche reader

A PORTABLE low cost microfiche reader has been introduced by Microscot. Called the Lenaman Mark 5 (pictured left) the reader has downward projecting lens, placing the image on to a white screen in the natural reading position. It is suitable for educational, scientific and library use as well as for micro-publishing programmes, with microfiche, jacketed microfilm and COM fiche.

The image is thrown downwards on to a built-in screen on the detachable front flap or a sheet of white paper on the desk.

Diagrams may also be measured or traced and the reader may easily be turned to read side-facing material or raised up to increase the magnification, said Microscot.

When laid on its back, the Lenaman can be used to provide wall projection for small meetings.

A removable panel in the back of the case gives access for replacement of the lamp, which is a 12 volt DC tungsten halogen type.

The basic lens has a magnification of 22 times for reading microfiche to COSATI or NMA specifications filmed at between 20 and 24 times reduction.

An alternative lens gives magnification of 34 times for reading 42/48 times COM fiche or conventional fiche filmed at similar magnification.

A floating lens swinging arm system will give a continuous in-focus condition under all operating circumstances. The alternative lens is stored in a plastic mounting on the side of the chassis for ease of access.

The reader has a door and screen slide that will accommodate both COM and A4 images. Two pairs of control knobs give rapid and positive image location using either the left or the right hand.

Frame location scales are calibrated to suit COSATI (five rows of 12), NMA (seven rows of 14) and COM (14 rows of 18) standard and Eurocom formats.

The reader meets the requirements of BS 3861 and a three amp cartridge fuse has been introduced on the outside case as the plastic rocker switch. The detachable mains plug and socket conform to the new EEC regulations. Lenaman costs £140 and discounts are available for bulk orders.

Microscot Ltd (CW), Mill House, Edgware Road, Colindale, London, NW9. Tel. 01-832 7827.

Line printer controller is 'transparent' to diagnostics

A WIDE range of line printer controllers for Digital Equipment PDP-11 and 8, Data General Novus, Hewlett-Packard HP21MX and Interdata computers is available from MDB Systems of Orange, California.

The plug-in controller can interface these minis with printers from Centronics, Data Printer, Dataproducts, Data 100, MDS, Tally, Potter, Houston Instruments and Dbbio with its 2300 series. A controller for the DEC LA180 is also available.

MDB points out that its controllers are transparent to host computer diagnostics, drivers and operating systems and that operation and programming with them is exactly the same as described by the computer manufacturer.

Each controller comes in the form of a single printer circuit board that occupies one chassis slot. The board can come with a 15-foot cable or with a long parallel cable allowing operation up to 3,000 feet away.

MDB Systems Inc (CW), 1995 North Botavia Street, Orange, California 92665, USA. Tel. (714) 998-8900.

It cuts both ways

A PAPER shredding unit, the Model CC9, which cuts across the paper as well as parallel with its length is now available from Ofrex Ltd of London.

The CC9 produces 1 mm x 10 mm paper chips which, according to Ofrex, ensures security of all discarded documents.

The CC9 has been added to the existing Ofrex Fordigraph shredder range, and is a development of the Fordigraph 9 which employs parallel cutting only.

According to Ofrex, the design of the CC9 eliminates the overheating problems previously

associated with cross cut shredders.

Other CC9 features include a 216 mm (8 1/2 inch) throat which can accept five or six A4 sheets in one pass when working at a rate of 80 feet of paper per minute. The maximum speed is 36 feet (18.3 metres) per minute.

The CC9 is a table-top unit, weighing 448 mm (18 inches) deep, 453 mm (18 inches) high and 223 mm (8 3/4 inches) wide. It can be supplied with its own mobile trolley.

Ofrex Ltd (CW), Ofrex House, Stephan Street, London, W1A 1EA. Tel. 01-636 9966.

Removing the carbon as well

A LOW cost decollator for separating two-part computer stationery and removing inter-leaved carbon has been introduced by James Wilkes.

The Mini-Decollator costs £350. Its features include fully adjustable speed controls, an easily removed carbon wheel and

trays for the separated forms. The Mini-Decollator is linked to James Wilkes' Burststar to form a complete forms handling system.

James Wilkes Ltd, Parkfield Road, Littlebury, Essex. Tel. 0206 22811.

Long term effect of the Threshold scheme on DP

By George Penney

THERE is a national shortage of experienced data processing staff. Anyone with two years' programming experience — regardless of how good or bad that experience — has a wide range of jobs open, and not just in the UK.

The National Computing Centre's study "Job trends in data processing" put the required annual growth in the number of operators, programmers and analysts required, to keep pace with current expansion, at 10,000; one of the major recruitment consultants recently estimated the current national shortage as 20,000.

To put these numbers in perspective, the total output of the Threshold and TOPS training schemes in 1977 will be between 700 and 800, rising probably to around 1,000 in 1978.

Initial training can represent a substantial investment — and with no guarantee of any return. To take a trainee programmer to the stage of producing working

job, becoming more and more proficient, perhaps for as long as that job exists before being overtaken by technological change. This is something that the more able graduate does not expect and is not prepared to do.

Thus, while the policy of restricting traineeships to graduates may work well for a proportion of the DP community, if it were pursued by all employers, it could only be a recipe for unrest.

The days when wrestling with machine code provided a continual challenge to the best brains are long since gone; now, the greater part of the work required in applications programming demands no more than moderate intelligence.

However, intelligence is far from being the only factor, and is perhaps not even the most important one.

On the Threshold scheme, the trainees choose, at about the half-way stage, whether to train in programming or operating, and there is no relationship apparent as yet between this choice and level of general intelligence as measured by standard psychometric tests.

Essentially, the people we are looking for in the Threshold scheme are of moderate intelligence, capable of learning practical skills, and with other abilities which will enable them to apply those skills, once acquired.

There are, at present, 14 courses running, with about 270 trainees. The course is not tied to the academic year, since periods of industrial placement can bridge the college holidays. By March 1978, we plan to have 500 trainees on courses.

The wastage, so far, has averaged around 10% of intake. This includes withdrawal through illness and return to full time education, as well as the simple discovery that "DP is not for me."

Movement into DP jobs during the early part of the course has been much more significant, averaging around 25% of the total intake by the half-way stage.

As most readers are probably aware by now, we do not apply, in recruiting for Threshold, the educational criteria applied by most employers in recruiting DP staff.

We find no evidence that either a degree or a given number of A or O-levels makes someone necessarily the right material to become a computer operator or programmer.

While such success is of course a part of the biographical data considered in any recruitment decision, it is, we believe, far from being the most important.

Whether or not we accept a candidate depends on his having the right combination of abilities as measured by discrete and complementary standard psychometric tests, and of personal qualities as judged in a carefully structured interview.

As a result, there are now computer operators and programmers in various parts of the country who had been unemployed for between three and 15 months after leaving school and would still, in all probability, be unemployed but for Threshold.

As most employers will readily concede, such people, lacking the conventional examination results, would not even have been granted an interview, and the talents they have now been able to demonstrate would

never have come to light.

Currently, total cost per trainee finding a job in DP is running at about £2,000. This includes the selection process, college fees, books, the training allowance of £19 a week and all costs of administration.

I estimate this compares favourably with the total cost of recruitment and training, including a comparable period (24 weeks) of practical experience in any organisation employing DP staff.

We select the colleges that will teach the Threshold course on the basis of their previous experience in teaching DP and the practical DP experience of the lecturing staff.

We specify the syllabus and provide course material, but the quality of the course depends above all on the enthusiasm, as

well as the experience, of the course tutor.

We have so far been fortunate in finding tutors dedicated to the cause of converting unemployed school leavers to desirable employees, and placing them in employment.

Their success can be judged from the fact that, from the first three courses, there are only four trainees not yet offered full time employment, and around 50% of the trainees on the next four courses are already placed.

Initially, we were funded by the Training Services Agency for one year only. They expressed their confidence in the way we were proceeding by doubling the funds for the second year, and the signs are that the scheme will be funded for several years to come.

The representative of the TSA who spoke at the first presentation of Threshold certificates in June said that they felt the scheme to be so worthwhile that it was their hope that it would be continued, with funds from industry, even after unemployment had eased.

There are those who consider it wrong for trainees to take a job before the end of the course; what I consider an even more extraordinary remark, made in my presence by a DP manager, is as follows: "Considerable sums of money are being spent in producing graduates; surely it is wrong to train school leavers, with no qualifications, to take the bread out of the mouths of graduates."

It is my view, as a graduate, that graduates are better equipped to make their own way than

school leavers, and, more especially, than the school leaver who has not fitted the educational machine.

Let graduates fill jobs suitable to their ability and let others, whose ambition does not run quite so high, operate computers and write applications programs and become better computer operators and programmers.

I believe a few years of output from the Threshold scheme may well change the face of data processing, by injecting just such people where they are needed — though I can already identify a few Threshold trainees who will be managing staff, including graduates, in 10 years' time!

SyFA's competitors don't frighten us.

In fact, if you complete the coupon below we'll send you a list of competitive distributed data processing systems. That's how frightened we are.

The buying decision with a distributed data processing system is no less important than your first mainframe decision. It's likely to depend as much on the profile and performance of the company you're buying from as on the technicalities of the system itself.

Although we must admit that having the world's most advanced system in SyFA does give us a head start.

Before you finalise your shopping list, assess the competition under headings like those below. To start the ball rolling, we've added a few sentences about Computer Automation.

Track record
Over the last five years worldwide sales and profits of Computer Automation have increased more than sixfold, building on an already sound financial base.

Delivery
You'll get a SyFA System installed and working within 45 days (yes, days) from the date of order.

Reliability. Now and in the future.

The SyFA System is based on Computer Automation's own Naked Mini, the Megabyte. With the computing power to support up to 24 independent terminals, and perform 43 tasks concurrently.

Coupon
☐ Please send me a full list of your competitors.
☐ Please send full technical information on the SyFA System.
☐ Please arrange to give me a demonstration of SyFA.
 Name _____ Position _____
 Company _____
 Tel. No. _____
 Address _____

150 Naked Mini computers are shipped, on programmed delivery, to OEM customers throughout the world each week. That's a measure of reliability.

Our customers invest their future in ours. Which is why we in turn invest so heavily in engineering, development, and customer support.

The Market
If you already have a mainframe but are being pressed to provide distributed network systems for your users, or you are looking at free-standing interactive minis, we have both the product and company you need.

Which is why SyFA's competitors don't frighten us. SyFA. Computing power where it's needed.

UNIVERSITY OF YORK

RESEARCH ASSISTANT

Applications are invited for the post of Research Assistant to work on a project which is concerned with the development, distribution and promotion of a compiler for the programming language MOOQA, in connection with the proposed SRC distributed computing research programme. Applicants should be experienced programmers, ideally in compiler writing, with a sound knowledge of small computers and systems of real-time programming. The post is for a three year period and the starting salary will be in the range £3,333-£3,761 p.a. (under review) with a contribution of 6.4% to the USS pension scheme. The post is for a three year period and the starting salary will be in the range £3,333-£3,761 p.a. (under review) with a contribution of 6.4% to the USS pension scheme. The post is for a three year period and the starting salary will be in the range £3,333-£3,761 p.a. (under review) with a contribution of 6.4% to the USS pension scheme.

University of London Computer Centre

Systems Programmers

(For Telecommunications and Quality Assurance)

Graphics Applications Programmer

The University of London Computer Centre is a regional computer centre which provides computing services to London, South Eastern and South Western Universities on Central Data 7800, 8800, 8400 and Cyber 72 computers. The Centre supports more than 70 remote batch terminals and is part of the University of London network: METRONET. Graphic facilities presently include CalComp 1670 Microfilm Recorder (11mm and 35mm) and 2100 Microfilm system, with in-house film processing.

Applications are invited for the following posts:

Telecommunications Posts (Ref 801)

Two Programmer/Analysts are required to join a team engaged in the design, improvement and maintenance of telecommunications systems on the mainframe and minicomputers. The development programme includes providing support for new protocols, higher line speeds and enhancements to METRONET. Applicants should have sound experience of assembly language programming and experience with telecommunications software would be an advantage.

Quality Assurance Post (Ref QAS1)

One Programmer/Analyst is required to join the Quality Assurance Unit which is responsible for the integration and testing of the software and for monitoring the quality of service. Applicants should have at least one year's experience in systems programming.

Graphics Post (Ref 1084)

One Programmer/Analyst to assist with the maintenance and provision of graphics software. The applicant should have an interest in all aspects of computer graphics — both batch and interactive — and the ability to develop original ideas. A sound knowledge of Fortran is required, with relevant experience would be an advantage.

Salaries for the posts above will be at appropriate points on the following academically related scales, which are under review.

Telecommunications Posts (£2927 to £5827) + £480 London Allowance (OA and Graphics Posts £2927 to £4817) + £480 London Allowance.

Leave entitlement is 6 weeks per year.

Further details and application forms (returnable by 12 December) are available by phoning Jean Dennington on 01-406 8400 extension 247 or by writing to the Secretary, ULCC 20 Gifford Street, WC1.

TECHNICAL AUTHORS

Opportunity for experienced DP Professionals

PARIS

To £11,000 p.a.

- + Automatic Cost of Living Rises

At Honeywell we put our Lecturers in a class of their own

As a highly respected multi-national computer manufacturer with a world-wide reputation for commercial success, Honeywell places an unusually high value on the quality of its customer support and education success. It places the same high value on its lecturers.

As part of a continuing programme we are seeking for virtually lecturers and potential lecturers with suitable experience to join the staff at our customer education centre at Hammersmith, West London.

You may already have had lecturing experience or you might be a systems analyst or programmer who wishes to move into lecturing. In either case, if you are a good communicator, capable of handling classes of up to 30 people, Honeywell has much to offer you. We see you as having a key role in customer support.

Successful candidates will receive a comprehensive training in the techniques of lecturing and on Honeywell products where necessary prior to commencing teaching at the training centre and at customer locations in this country and overseas.

This is a good opportunity for dedicated and ambitious men and women to enter into an extensive and sophisticated training environment, hands-on based in London.

Our investment in the customer education area is growing and there will be ample opportunity for you to develop your own potential.

Salaries range from £4000 to £5000 depending on experience plus a benefits package.

Please telephone or write for an application form to: Gerrick Fraser, Honeywell House, Great West Road, Brentford, Telephone 568-9191 ext 382.

IBM COMPUTER BROKERAGE

Initially I am looking for a tireless and tenacious salesman who is the best dealer of IBM secondhand equipment in the U.K. and Europe. He will prove effective immediately without supervision. In six months — if he has been continuously effective — he becomes Sales Manager and will recruit two salesmen. In the next six months — if the team has been continuously effective — he becomes General Manager and will have a sales manager and two salesmen reporting to him. His earnings will be limited only by his own efforts. His future will be to take over all aspects of the IBM and European Operations depending upon his development. West End office: 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

Systems Planning Manager

Salary: Circa £8,250 p.a. Location: Surrey

Our client regards this appointment as fundamental to the future development of computer systems within their company. A departmental reorganisation has created a position which will offer the successful candidate a particularly exciting career opportunity, both in the short AND long term. We want to meet a real Systems and Programming 'professional' who is now looking for an opportunity to apply that professionalism to a growing and successful Data Processing environment.

Your first task will be to take over the Systems and Programming group and ensure that it continues to operate successfully. You will then be expected to liaise with more senior management to develop a strategy both in terms of hardware planning and applications development.

Your past experience will indicate significant systems knowledge and you will be able to prove 'a job well done' in your current employment. Your applications background will ideally be in financial and manufacturing systems, although applicants with other backgrounds will certainly be considered should they appear to have the

right level of seniority. You will also be able to control people in both systems and a programming environment. Your technical background will enable you to discuss sensibly and competently, technical problems with programming staff, but your recent involvement will have been in planning how management needs can be assisted by computer resources.

As a person, you will be sharp minded, able to talk at a senior level with confidence, good at communications both verbally and written, and will show considerable dynamism in your people management skills. You will enjoy hard work and be able to communicate this to your subordinates, and will have matured to the point where your interests are as much involved with business as computer systems.

We would like to receive applications for this position as soon as possible. We therefore invite you to forward a comprehensive curriculum vitae to the address below, or alternatively, telephone John Goldsmith at his home on Sunday, 11th December between 8.00 p.m. and 9.30 p.m. Telephone No: Camberley 21266. Ref. 1103.

ANALYSTS/PROGRAMMERS

A NEW YEAR A NEW CAREER
IN SOUTH WALES AND THE WEST COUNTRY

Major National and International companies in South Wales and the West are seeking good experienced analysis and programming professionals to join their expanding D.P. Departments. Analysts are required with specialist experience in the field of finance and insurance or with a more general commercial background. Salaries offered range from £4,500 to £6,500 p.a. depending upon position and experience.

Programmers should have 2 to 3 years' experience, preferably of using Cobol on ICL or IBM mainframes. Again salaries depend upon position and experience, but range from £3,500 to £5,500 p.a. All positions carry the usual large company benefits and in certain cases successful applicants may qualify for relocation expenses.

Now is a fine time to think about a New Year move, so for further details contact **ATA Computer Recruitment, Equity & Law House, 36/38 Baldwin Street, Bristol - (0272) 211035.**

AREA SALES MANAGER

ON QUOTA c£11,000 + CAR
EAST SCOTLAND

Our client won't guarantee you a successful New Year, but 50% of their existing salesforce will be enjoying an expenses paid fortnight in the States after making 125% of Quota in 1977.

You will be selling advanced business computer systems, inc. the market leader in Key to Disk data capture equipment and management information systems using powerful database techniques, in the Borders, East Central and North East of Scotland. Applicants should ideally have a successful sales record in mainframe/minicomputer or related fields. Remuneration is by way of basic salary plus commission, a 2 litre car + normal large company benefits.

For an immediate interview telephone 031-226 5381 or write to: **ATA Computer Recruitment, Anglia House, 3rd Floor, 24-26 Frederick Street, Edinburgh.**

Opportunities in Small Systems Software Development

Bracknell

Salaries £3300 to £8000

ICL is embarking on a programme of significant development and enhancement of small system software. Projects range from compiler development and file management to operating systems.

We offer excellent facilities, including hands-on computer time and an environment which will be of appeal to anyone already involved with or wishing to move into systems programming. We have positions ranging from junior programmer to systems consultant and our salary scales can match most situations.

For more information ring Peter Mills on Bracknell 24842 Extension 2169 or write to him; quoting reference CV1619, at ICL, Lovelace Road, Bracknell, Berks RG12 4SN.

Technical Support
Manager

Reading

£7,200

Our client, who provides Facilities Management services, also runs their own in-house computers. This installation comprises two 2970's and two 1903 A's with plans to install a large 2904 and 1904S. There is also a large communications network. A vacancy exists for a Technical Support Manager to plan and control all operations software and communications support.

The Technical Support Manager will have direct responsibility for ten support staff who are involved with the planning, implementation and maintenance of VME/B, GEORGE II and IIT. Duties include: the control of a communications network; providing a technical advice service; ensuring that projects are undertaken with a high standard of technical competence and that the operating systems and hardware are tuned and sized to provide optimum throughput of systems.

This vacancy requires both management and technical skills. Applicants should have at least four years experience of system support. An ability to maintain a professional attitude whilst working under constant pressure is essential, since customers rely on a stable, optimised operating environment to meet their strict schedules.

This is an ideal career-development step for someone who wishes to move into Project Management or has systems experience and wants to progress into a Technical Management role. The job is very demanding but gives tremendous job satisfaction whilst offering substantial rewards. Ref: 106/CW

To apply for any of the above positions or for further information, please telephone or write to Randa Nute or Sandy Lloyd on 01-242 9356. If it would be more convenient to telephone in the evening, the telephone numbers are: Randa Nute, 01-874 6372, Sandy Lloyd, 01-691 5168.

Banking Systems - Sales Consultants

Hoskyns is one of the largest and most successful computer services companies, providing a complete range of services on a worldwide basis.

Our specialised banking division has a high reputation for the quality of its services resulting from over ten years of involvement with a wide variety of banking clients. The services and products that we provide include:

- * a standard international banking system handling retail and wholesale applications on an international basis
- * turnkey systems based upon a variety of manufacturers' equipment
- * banking and technical consultancy
- * systems and programming resources.

We are now significantly expanding our activities in the banking sector and we are therefore looking for additional professionals to join our banking sales team. Such people will be dedicated to the marketing of our services to a wide variety of banks in the U.K. and overseas. They might also become directly involved in providing consultancy and implementation support to our banking clients.

Suitable candidates will probably be between 25-40 and will have:

- * a strong DP background
- * a good understanding of retail and wholesale banking applications - this may have been gained from working in a bank or from selling or implementing systems solutions.
- * initiative, enthusiasm and the ability to communicate at all levels

The rewards are significant and the remuneration package offered will be highly attractive to candidates who can demonstrate their ability to make a significant contribution to our activities. Hoskyns is a professional company with a high growth offering a wealth of career development opportunities for its executives.

If you are interested then please send me your career details or call me direct: DICK WILLOTT, JOHN HOSKYN & COMPANY LIMITED, 91-93 FARRINGDON ROAD, LONDON EC1M 3LB. 01-242 1951.

hoskyns

A systems company with over 600 professionals, 12 computer centres and 17 years of continuous growth.

CUNNINGHAM DISTRICT COUNCIL
Finance Department
SYSTEMS ANALYST/
PROGRAMMER

Post Ref. 02/86A

Salary AP IV £4,477-£4,915
(Inclusive of salary supplements)

The District Council have recently acquired a disc based N.C.R. 8250 Computer, programmed in COBOL, running under an interactive multi-programming operating system.

Applicants should ideally have experience of local government procedures and a sound computing background.

The successful applicant will be responsible for maintenance of existing programmes, liaison with N.C.R. in the installation of package programmes and development of new systems.

Free group life assurance scheme is in operation. Housing may be available to suitable applicant.

Applications stating age and experience and with details of two referees should be forwarded to Director of Finance and Establishment Officer, from whom further particulars may be obtained, not later than 26th December, 1977.

Post reference number should appear on all applications, which should be addressed to Cunningham House, Irvine KA12 8EE, Ayrshire.

DATA SCIENCES INTERNATIONAL LIMITED
COMPUTER OPERATORS

Data Sciences International Ltd. are seeking additional staff with at least 12 months' experience of ICL 1900 equipment. Our ICL 1904A is being substantially upgraded in January 1978 and is operating on a 3 shift system. Substantial overtime earnings can be achieved, which together with a salary reflecting the market rate, makes a most attractive opportunity to join one of the leading Computer bureaux.

Some assistance may be given with relocation expenses.

Applications in writing or by telephone should be made to:

Anglian Water Authority

Our client, a public body, is located in a most attractive part of East Anglia within easy reach of London and the Midlands. At the moment, it is in the process of installing one of the largest and most significant DP operations in the country, utilising two Honeywell 68/10 computers with extensive use of data base and telecommunications techniques including 100+ remote terminals.

Our client requires:

PROJECT LEADER TO £6,830

Experienced chief programmer of graduate calibre with minimum five years experience COBOL, FORTRAN and ASSEMBLER language. NJC Grade 9. Ref. No. 106/P/CW.

SYSTEMS ANALYST TO £5,537

Strong computing background and experience of financial systems in a large installation including on-line applications and data base concepts and experience of design and analysis. NJC Grade 7. Ref. No. 107/P/CW.

SENIOR SOFTWARE DESIGNER TO £5,537

Graduate with 3+ years programming experience including use of COBOL and knowledge of teleprocessing including VDU's etc. NJC Grade 7. Ref. No. 108/P/CW.

PROGRAMMING TEAM LEADER TO £5,000

University degree/relevant business qualifications, 3+ years programming experience with COBOL, teleprocessing and knowledge of data base with experience of leading a team. NJC Grade 6. Ref. No. 109/P/CW.

SENIOR PROGRAMMER TO £4,517

3+ years experience with COBOL and interactive programme development, modular/structured programming techniques. NJC Grade 5. Ref. No. 110/P/CW.

PROGRAMMERS TO £4,073

2+ years programming experience using COBOL and modular programming/testing techniques. NJC Grade 4. Ref. No. 111/P/CW.

JUNIOR PROGRAMMERS/TRAINEEES TO £3,210

Minimum one years' experience including COBOL or an ideal opportunity for an HND "A" level calibre man or woman to build a career in the computer sciences. NJC Grade 2. Ref. No. 112/P/CW.

These are career positions which will appeal to computer professionals anxious to develop their skills in a progressive environment. Our client offers truly generous relocation and re-settlement benefits in a low cost housing area.

If any of these opportunities are of interest, you are invited to come for an informal talk to consultants advising the Anglian Water Board on these appointments, to the following locations.

MANAGEMENT SELECTION

GO W... ..

C.E.G.B. is about to embark on a significant expansion programme, this includes moving the Headquarters to a modern, purpose-built centre, at Badminton Down, on the Southern outskirts of Bristol, and taking delivery of a further machine. Currently the installation is centred around an ICL 1903T processor, utilising COMMUNICATIONS MANAGER for real-time development.

A three-year systems development plan has isolated a series of interesting and varied projects for advanced in concept and in preparation for the 1980s.

For those who demand a stimulating environment and a challenging career progression:

CONTACT ANDY CARTER on 021-238 3761, reversing the charges if necessary. EVENINGS Lapworth 3272.

Can you relate your academic qualifications and experience to the specific requirements of our client?

Systems Adviser —

SALARY RANGE £5,500-£6,950 (to £7,550)

- * substantial in-depth knowledge of commercial systems
- * minimum of five years' systems involvement
- * Good communicative ability
- * the desire to move into a planning co-ordination role

Senior Systems Analyst —

SALARY RANGE £5,500-£6,950 (to £7,550)

- * a minimum of five years' systems experience, some of which must have been spent in a supervisory capacity
- * implemented at least one major system
- * communicate effectively with all levels of management

Systems Analyst —

SALARY RANGE £4,900-£6,400

- * a minimum of three years' systems experience
- * preferably a programming background within a commercial installation

Junior Analyst —

SALARY RANGE £3,525-£4,775

- * an understanding of systems work in a commercial environment
- * a genuine desire to move into a formal systems role

Senior Programmers —

SALARY RANGE £4,775-£6,225

- * in-depth programming experience, preferably COBOL
- * thorough knowledge of 1900 series equipment
- * previous supervisory or design experience an advantage

Programmers —

SALARY RANGE £3,525-£4,775

- * a minimum of 12 months' COBOL experience, preferably gained in an ICL environment
- * the desire to work in a small town environment

Software Programmers —

SALARY RANGE £4,775-£6,225 or £5,525-£6,775 (to £7,375)

- * a minimum of three years' software programming experience preferably within an ICL installation
- * a knowledge of data communication procedures
- * a thorough understanding of GEORGE III
- * a higher salary range applicable to Team Leader

User Liaison Officer —

SALARY RANGE £4,775-£6,225

- * In-depth operations experience of job control and data processing methods at a supervisory level
- * be self-motivating and prepared to work with a minimum of supervision
- * experience of key-to-disc systems an advantage

SRC is retained by C.E.G.B., specifically to recruit for the above positions. All applicants should apply directly to SRC who are conducting the initial interviews.

HOLLAND

Technical Authors package £10,000 (min)

Our Client in Holland, requires Authors to produce user end in-house documentation for reference and guidance purposes on commercial mini-computer d.c. networks. Candidates do not necessarily need a detailed knowledge of d.c. but must be able to demonstrate writing ability and technical flair. User aware programmers or analysts, who enjoy documentation and technical communication, will be considered seriously.

Vacancies also exist for writers in other technical areas (H/W or S/W) and we would be pleased to hear from people interested in working abroad.

Excellent salary and benefits, pleasant location.

Contact Jim Baker

PARIS

Analyst Programmer up to £9000

Our Client, a large International Trading, Shipping and Financial Organisation, has an immediate opportunity for an experienced Analyst Programmer to join a small development team in Paris.

Applicants, who must either speak French or be prepared to learn, should have at least two years experience in the design and implementation of finance and accounting applications on minicomputers, preferably HP3000 but a PDP11 or NOVA background would be acceptable.

It is essential that candidates have used FORTRAN or COBOL in a database/real-time environment.

Permanent positions. Salary negotiable with generous fringe benefits and ideal working conditions in the centre of Paris.

Contact Jim Baker

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

WEST AFRICA

Systems Analyst c.£10,000 + benefits

Our Client, a Consultancy Organisation, requires an Analyst for a one year project in Sierra Leone, commencing early in January. Candidates will be very systems minded, have a strong O & M background, and, ideally, experience in a manufacturing environment. Position would suit, perhaps, an ex-O & M person with good analytical abilities. Single status preferred. Benefits include car and house provided.

Contact Mike Creemers

Data Base Consultants

London Based £6000-£10,000

One of the U.K.'s most respected software houses, well known for its database work, wishes to recruit additional database specialists. They will be required to work on a variety of client projects which could range from advising on the feasibility and implications of adopting the database approach to leading an implementation project. A wide computer and applications background together with experience of special analysis and design methods appropriate to database are more important than detailed software knowledge. One of the positions requires detailed knowledge of the oil industry.

Contact Margaret Stevens

Minicomputer Programmers

West of London c.£5000 +

A small but dynamic software organisation has vacancies for Programmers to work on a number of sophisticated development projects.

Applicants should have at least one year's experience of a high level language such as FORTRAN, CORAL or BASIC on PDP11's, NOVA or H.P. Knowledge of an assembler would be an advantage.

Salary negotiable according to experience.

SYSTEMS
ANALYSTS
To £6,250

As a large, well established international company, our client enjoys high profitability, diverse product manufacture and recognised market leadership. Their D.P. facility is based on the Kent/S.E. London border. Committed as they are to a major hardware expansion inhouse and throughout fifteen U.K. locations their main facility now requires three Senior Analysts and one Systems Analyst. The current D.P. structure comprises three project teams. Involvement will primarily be on implementation of a management information system and a materials control programme. However, other diverse functions mark these positions as highly demanding and stimulating.

Ideally applicants will have 3-5 years' mainframe experience which will enable them to capitalise upon the very real career opportunities available. Remuneration is to the following levels: Senior Analysts to £6,250. Systems Analysts to £5,500. Equally all the usual large company benefits apply.

For an immediate and confidential interview please contact either our London or Crawley offices on 01-637 0781 or (0293) 514071.

Rediffusion at Aylesbury Programming Manager

We have a large ICL installation - 1903A plus 1801T plus 32 key to disc stations, etc. - in a modern purpose-built computer block in the centre of the Chiltern Country. We need a Programming Manager to help plan a number of interesting future developments. He, or she, will have a minimum of four years' experience, preferably including planning. He or she will be well able to apply project control techniques and be prepared to reinforce our existing programming standards.

An appropriate salary, with the usual fringe benefits, will be paid and if necessary help will be given with removal expenses.

Please write briefly to: R. H. Bryant, Data Processing Manager, Rediffusion Central Services Limited, PO Box 80, Rediffusion House, Gatton Road, Aylesbury, Bucks. HP18 3DU.

REDIFFUSION

MANCHESTER

SENIOR SYSTEMS ANALYST

(with definite management opportunity)

SALARY—£5-£6,000

Due to our Clients' continuing success in the light manufacturing field, they now seek a Senior Systems Analyst with a minimum of 3 years' experience in a manufacturing environment. The successful applicant will take responsibility for leading a team of Systems Analysts developing manufacturing systems for a number of user sites throughout the North-West. Ideally, experience of CICS, combined with a knowledge of data-base is required for this position.

It is envisaged that the post of Systems Manager will be filled within the next 12 months, preferably by internal promotion.

Our Clients are located in a purpose-built Computer Centre close to the motorway network of South-East Lancashire, and assistance with re-location expenses is available.

Contact: TONY DEANE on: 061-833 0676

SYSTEMS AND PROGRAMMING OPPORTUNITIES

We are retained by our Client to recruit within their expanding Organization Systems Analysts and Programmers. Here is the opportunity to join a young DP Department in the prime of its development programme, offering excellent opportunities for career progression, and the chance to work in a real-time environment. The operation is based within a new purpose-built Computer Centre, housing a twin IBM 370 installation, utilising over 200 VDU's. The requirements are as follows:

SYSTEMS ANALYSTS —SALARIES TO £5K

Candidates should have:

- * 2-3 years' experience in systems
- * a knowledge of commercial applications
- * preferably, but not essentially, a programming background

PROGRAMMERS —SALARIES TO £5K

Candidates should have:

- * a minimum of 2 years' experience in a low-level language
- * a commercial background
- * experience of teleprocessing techniques is preferred, but not essential
- * a desire to work in a flexi-time environment

Our Client offers above average terms and conditions of employment with the added advantage of working in a locality easily accessible to the more beautiful parts of Yorkshire. A re-location package will be offered where applicable.

Interested!

Contact: SHEILA BRADBURY on: 061-833 0676

Senior Computer Opportunities

The National Computing Centre is an organisation financed by industry, commerce and government with a vital role to play in the promotion and development of wider and more effective computer usage throughout the United Kingdom. Our headquarters in Manchester is a modern building ideally situated for local and national transport.

We currently have the following vacancies:-

Distributed Computing Up to £6500

Experienced and creative Data Processing Professionals to undertake studies which will provide information and guidance on the development of systems using data communications. Candidates will be in the 30-40 age range, preferably with a degree or professional qualification; they will have some years

experience in computing which includes the design and implementation of on-line systems, the effective use of data communications and familiarity with protocols, and applications involving mini-computers—particularly Distributed Systems

Product Planning & Market Research Up to £6500

To join a small team engaged on a wide range of activities associated with product planning and research. These will range from—

1. Market Research Studies to assess needs and demands.
2. Exploiting to the greatest advantage (in the form of commercial products and services) the results of Research and Investigatory Studies carried out by NCC Technical Staff.
3. Revision of the specification and/or price of existing NCC products and services.

4. Negotiating with external organisations over agency arrangements for the purchase and/or sale of products and services.

Candidates will have an extensive range of general computing experience, preferably in both a user organisation and a manufacturer/ service company environment together with direct market research experience and involvement in the specification/ pricing of computing products.

All posts are based in Manchester; conditions of service are excellent and include 25 days annual leave, nine statutory holidays plus contributory life assurance and pension schemes; help with re-location expenses.

Applications please—either sex—with career details stating in which post you are interested to the Personnel Manager, National Computing Centre Limited, Oxford Road, Manchester M1 7ED or telephone 061-228 8333 for application form.

London based

£5,000 - £6,500

The professional experience of a Management Consultant covers a wide range of problems in many types of company. Developing practical solutions for management and working with colleagues who are specialists in other disciplines, will rapidly broaden your understanding of business. A period in consultancy with one of the leading firms can help you cater to general management or to specialist competence.

If you have a very good degree or the professional equivalent and between one and three years' commercial

experience, we can offer a continuing training programme in DP skills, and other management techniques. Our consultants also have the opportunity to work in Europe, Africa and the Middle East and for this an additional salary is paid.

Applications, which will be treated in strict confidence, should contain relevant details of career and salary progression, age, education and qualifications. Please write to Dr. I. Bowers (ref. 658/FY).

Box No. 1913, Computer Weekly.

MYRIAD APPOINTMENTS LIMITED

Computer Personnel Consultants

DEVELOP ON-LINE SKILLS COBOL PROGRAMMERS

MIDD/BERKS BORDER

£5500

A SENIOR PROGRAMMER is required to join a busy Programming Team developing On-Line applications for Light Engineering Company. The Team will initially design the software architecture for their new ICL Computer; developing macros and familiarising themselves with On-Line programming techniques. Several major systems are to be developed in the coming year permitting the Senior Programmer the opportunity of designing and implementing On-Line Programs. He/she will be encouraged to develop System and Software Programming skills; or alternatively progress to a greater Analysts involvement. Although Programmers are required at both Senior and Junior levels, our Client is keen to recruit an experienced SENIOR PROGRAMMER in the first instance with at least three years' experience using COBOL.

The Company offers a pleasant working environment with favourable terms of employment.

SENIOR ANALYST/PROGRAMMERS ANALYST/PROGRAMMERS

ESSEX

£5000-£6500

We wish to recruit Analyst/Programmers and Senior Analyst/Programmers to work in a stimulating environment within our client's Data Processing Division.

Candidates for the positions of Analyst/Programmers will be required to have sound programming experience coupled with the ability and genuine desire to move towards analysis.

For the senior positions candidates will be able to offer in the region of two to three years' systems design/analysis experience, and will come from a programming background.

The successful applicants will take their places in a small, friendly and active department where they will have the opportunity to work on the development of a variety of interesting projects.

Salaries are negotiable but as a guideline are likely to fall into the above quoted range. They are further enhanced by a comprehensive company benefits package.

BROADEN YOUR HORIZON SYSTEMS ANALYSTS

Near HAMMERSMITH

To £6250

A major group of companies with offices throughout Europe requires two additional Systems Analysts to develop applications based at their Head Office in London.

Applicants should have a minimum of two years' experience preferably supported by a programming background. Projects include General Accounting, Stock Control and a host of unusual and interesting systems involving close user contact.

The Company has substantial contracts throughout the UK and Europe and currently has a 30% growth rate. Extremely good conditions of employment are enhanced by individual training schemes with considerable scope for advancement. Generous commencing salaries will be offered in the range £6000 to £8250 per annum.

FINANCIAL ON-LINE SYSTEMS SYSTEMS ANALYST

MIDD/BERKS BORDER

£6000

A Systems Analyst is required to develop On-Line Financial Systems for a busy engineering factory. The Company has recently taken delivery of a new ICL Computer and is in the process of building a small Systems Team of capable Analysts to assist with the development of an agreed Systems Plan. Reporting to the Senior Analyst, the successful applicant will take responsibility for the design and implementation of financial applications.

Applicants should have AT LEAST TWO YEARS' ANALYSIS experience and have a knowledge of Financial Systems. Although On-Line experience is not required a keen interest in computer issues is desirable. The Company offers a pleasant working environment with favourable terms of employment.

Please telephone for a confidential discussion or write to:

Northern Star Insurance Company Ltd

Installation IBM 370/138 Location: Central Croydon

THE DP DEPARTMENT

is developing major On-Line systems using CICS/VS and DL 1. This will involve 60+ VDU's IBM 370/138, 2000 meg-bytes On-Line data. The Department operates in a very dynamic environment using the latest techniques including IPT, On-Line program development.

SYSTEMS ANALYSTS

Salary Circa £6000 p.a.

- around 3 years solid experience in DP
- involved in at least one major system

PROGRAMMERS

Salary circa £4000 - £4500 p.a.

- around 2 years sound COBOL experience.
- On-Line experience, particularly in CICS would be a distinct advantage, as would an Insurance background for Analysts, but primarily we require dedicated professionals and full training will be provided.

ANALYST/PROGRAMMER

Salary circa £5250 - £5750 p.a.

- around 3 years COBOL/ASSEMBLER experience
- 1 year's Analysis experience
- To control a small but vital team enhancing current systems.
- Here is your opportunity to step into team management in an area of prime importance to the Company.

Northern Star Insurance Company is engaged in a period of controlled expansion. The offices and D.P. Accommodation are located in a prestige office block in the middle of the Whitgift Shopping Centre. Just 5 minutes walk from East and West Croydon British Rail Stations. Car Parks close by. Working conditions are excellent; there is a non-contributory pension scheme, half yearly bonus, LVs, Staff Club and licensed bar.

If you are interested in finding out more write or phone Jean Knight at the following address:

PROGRAMMERS

A Challenge from United Friendly

Salaries negotiable up to £5,500

Some of the most interesting developments in Data Processing today are taking place within the Insurance Industry.

United Friendly, a London-based organisation is expanding rapidly and Management is committed to computing as the prime tool for operating and controlling the Company. They utilise two ICL System 4 computers and are about to phase-in the more powerful ICL 2960.

As a result of this expansion UF is able to offer experienced programming staff at all levels outstanding opportunities within the various Systems Development Departments. Versatility is the keynote to the success and therefore high calibre programmers are needed with experience of COBOL on either ICL System 4, IBM or ICL 2900 machines.

We are also seeking Junior programmers with one year's experience, who will receive full training in advanced programming techniques.

In addition to excellent salaries, candidates will enjoy technically rewarding projects and a pleasant working environment. Good career prospects are open to those who contribute and enhance the professional reputation and expertise of this group.

For further information on any of the above vacancies please contact Margaret Stevens.

JAMES BAKER ASSOCIATES
International Personnel Consultants
16 Maddox Street, London W.1. Tel: 01-491 4478

Working as a Systems Analyst with American Express says more for your career than any ordinary job can

SALARY: Circa £5,250 per annum Plus substantial mortgage subsidy; Plus non-contributory pension scheme; Plus free life assurance scheme. PLUS FULL RELOCATION EXPENSES TO BRIGHTON

Our client is the Card Division of American Express. They are looking for a number of Systems Analysts to join them during an exciting phase of their computer expansion. Whilst all positions are based in BRIGHTON, Sussex, a number of them cover responsibility for international systems development, and this may entail significant travel. Successful applicants will have been working in a commercial/financial environment for between 2 and 3 years. During that time, you will have played a significant role in the development of at least two major projects. You will have a strong belief in your ability to develop effective systems and will be able to convey this confidence to users and other members of your department. You are probably now working in an environment which is not stretching your capabilities as much as it should, and are now looking for a challenge which will prove to you one way or the

other, whether you are any good. Without any doubt, you will be ambitious and anxious to get things done quickly. At American Express you will be given that opportunity. You will learn a great deal over the next few years, not only how to develop computer systems, but also how systems can influence business, and that is surely what systems analysis is all about.

Applicants are invited to contact John Goldsmith at the address below, or alternatively, at his home on Sunday, 11th December between 8.00 p.m. and 9.30 p.m. Telephone No. Camberley 21266. Ref. 1104.

He can then arrange an informal interview with members of our technical staff. (Your interview expenses reimbursed).

Computer Applications Engineer

North Sea Oil and Gas production

to work for a major oilfield Operator on the introduction of computerised systems covering aspects of North Sea Oil and Gas producing platforms.

The duties of the job will be to take a co-ordinating role in the operational aspects of new computer systems controlling the production and flow of oil and gas from offshore to terminals in Shetland and North East Scotland.

Applicants should hold a degree in Engineering Science or at least a National Certificate and have had related experience on the application of computer systems in an oil or process control industry.

The position is primarily shore based with occasional visits to offshore platforms for which additional allowances are paid. The successful candidate will be required to live in the Aberdeen area. Generous relocation expenses will therefore be paid. If necessary, the salary will be negotiable within the range £5,000 to £7,000 p.a. subject to qualifications and experience. Usual large company benefits apply.

Please write with full details. These will be forwarded direct to our client. List separately any companies to whom your application should not be sent. Ref. FY.173r.

This appointment is open to men and women.

Engineering Software Production New opportunities at Newcastle-under-Lyme and Bracknell

Customer Engineering Division in ICL is creating a new team of experienced software producers in New Production Engineering.

We need management and programming men and women with experience in the production of effective software to tight timescales. You will provide our customer engineers with software tools to improve the cost-effectiveness of our maintenance services.

You should preferably have a 1900 software background and be:

- Self-motivated and results-oriented.
- Able to take responsibility for all aspects of program production from formulation of a specification through design, coding, testing and documentation.
- Articulate and able to communicate with engineers as well as software staff.
- Keen to establish a personal reputation for meeting time and quality targets for software production.

ICL is British-owned and Europe's leading computer manufacturer successfully marketing a range of systems in over 70 territories worldwide. The Company sells systems to Industry, Commerce, Research, Establishments, Universities and Governments.

Specifically we have the following opportunities in Engineering Software Production:

Production Manager Newcastle-under-Lyme £6000-£7500

You will lead the programming teams in meeting agreed quality and timescale targets, head negotiations for the agreement of specifications and co-ordinate the activities which lead to enthusiastic use of the test programs by Customer Engineers.

Technical competence is a pre-requisite, and the ability to motivate highly skilled staff in a challenging environment is essential. (Ref CW1621A).

Planning Engineer Newcastle-under-Lyme £5500-£6500

You will assist the Production Manager in preparing plans, monitor their progress, identify potential shortfalls, and take corrective action where necessary.

For the unit to meet its targets, you will also ensure computer resources and supporting services are readily available round the clock. (Ref CW1621B).

Analysts/Programmers Newcastle-under-Lyme & Bracknell £5000-£6000

Small teams will work on each major application. They will produce an overall system design, then detailed program specifications. The programs will be written, tested and documented by the team, ready for validation and issue to the field.

In addition to experience of software development using PL/I under Operators Executive and George operating systems, some experience of 1900 Executive mode working would be useful. (Ref CW1621C).

Assistance with relocation expenses can be given where appropriate. For further details telephone Ray Sayers on Newcastle-under-Lyme (0782) 630121. Alternatively write for an application form to A.E. Turner, International Computers Ltd, 85/91 Upper Richmond Road, Putney, London SW15, quoting appropriate reference.

We could place a third of the entire industry in now positions if sufficient profiles were completed. Let EMS get results for you.
Consultant: Don Walklate/Selina Mills.

Leading Vacancies
Middlesex To £6500

Project Leaders, Senior Analysts, Analysts, Program Designers, Chief Programmers and Programmers. Opportunities exist with a large group, substantially increasing their investment in modern, sophisticated hardware, for a wide range of experienced DP staff. Experience in the following areas to urgently require: Production Control, On-line/Real time Systems, Database development, general commercial Accounting and Sales Order Processing, down to COBOL programming. Opportunities not to be missed in the Middlesex area.
Consultant: Selina Mills/Carol Proudman.

IBM Analyst
Manchester To £4800

Good commercial experience in an IBM environment is sought. Ideally applicants should have worked at least 2 years in a similar position. The group have an international clientele and supply engineering products to a large consumer market.
Consultant: Don Walklate.

Marketing Support
Consultants
To £6000 +

Candidates educated to minimum HNC level or required by the IMS group to assist with the marketing of Honeywell Level B Mini Computers. Systems, ICL 2900 Series timesharing and general package development/sales. Ability to function as a junior business analyst will be important to rapidly identify and propose relevant solutions to client problems. Equally duties will include assisting with the recruitment of resources division support staff to cope with the rapid development of the EMS Group. Ability to present reports and recommendations at director level will assist all applicants. For further job specifications contact: John Wood.

ICL 1900 COBOL
Programmers
West Country To £5000

A small Gloucestershire bureau has vacancies for additional Programmers to assist with developing client accounts. Candidates will be given appropriate applications training where necessary. Opportunities exist for both Junior and Senior staff working in a very popular location with good middle term career prospects.
Consultant: John Wood.

Systems Programmers,
Systems Designers,
Systems Engineers
London To £5300

A large banking group have numerous vacancies for staff experienced in OOS/VS, ASSEMBLER or COBOL and possibly CICS. A minimum 2 years' IBM 370 experience is essential. Equally, relevant staff with experience of financial system or banking would be of special interest. Excellent working conditions are available in a convenient City location.
Consultant: Selina Mills.

Systems Analysts
West Midlands
To £4400

Preference will be for candidates educated to at least HND level. The main activities of systems development include investigation of existing systems and assessment of future requirements. Preparation of initial reports and agreements with clients. Preparation of individual program specifications including test plans. Systems testing and Parallel/Pilot running and completion of time schedules which must be adhered to.
Consultant: John Wood.

IBM 370 PL/1
Analysts/
Programmers
Lancashire To £7000

Any experience of IMS would be especially welcomed. We have urgent, large scale requirements for a leading industrial group about to embark upon a major systems development project. Experience of working in a manufacturing industry would be advantageous. Staff will be expected to work in large project teams, involving tight schedule controls. Opportunities also exist for travelling throughout the U.K. to other group sites if required during latter 1978. Attractive salaries will be paid to a wide range of applications and software support staff with 2 years' and more practical experience.
Consultant: Neil Bradley.

Recruitment Consultants
To £6,000 Birmingham

EMS need additional experienced business Analysts, or even current Recruitment Consultants to assist with the rapid expansion of our sophisticated recruitment facility within the new Birmingham Data Centre. Facilities are available which are unrivalled elsewhere throughout Europe.

We seek smart, businesslike Analysts capable of rapidly assessing a candidate's true depth of experience and formulating clear concise reports for client presentation. Equally, applications should show commercial aptitude for customer negotiations and presentation of company services at managerial, or on occasions, board level. Sound opportunities exist for career development and adequate reward following successful services marketing. Without doubt, these positions, with the U.K.'s foremost consultancy, offer prospects unrivalled elsewhere and the degree of job security unlikely to be rivalled during our constant sales expansion projects.
Consultant: John Wood

Turnkey Systems Salesmen
Various UK £10,000-£15,000 earnings

EMS has just embarked upon a major new diversification with a £2-£3m capital investment project, starting initially with a large sophisticated Data Centre just opening in Birmingham with additional regional centres to open throughout the U.K. during the next 2 years. Each centre has large hardware development and demonstration areas and numerous software/applications systems development areas. EMS initially will be embarking on a dual system approach marketing both Honeywell Level 6 and ICL 7502's linked to our own mainframes. Equally, substantial investment in package development has been initiated, with teams already at work on a wide range of applications projects. We urgently seek only experienced salesmen capable of working on the promotion of hardware and software systems, with an adequate knowledge of application requirements. EMS have a specialist division dedicated to customer support able to take a large amount of conventional software assessment away from salesmen enabling them to substantially increase their marketing availability. We envisage highly motivated salesmen being of sufficient calibre to present equipment to seminars of clients numbering up to 100 as well as to negotiate without support on occasions at client board level. Earnings should be very attractive for experienced salesmen.
Consultant: John Wood.

Diagnostic
Programmer
Surrey C. £5000

Applicants should be educated to minimum "A" level with at least four years' ASSEMBLER programming experience. A knowledge of Minis is desirable. The company will also consider programmers with an engineering background willing to switch to software development. Liaison will be involved with Engineering, R & D and Support Services. Mainly, you would be working within the software service group without supervision, problem solving, programming maintenance, existing programs, writing new suites and installing new equipment, providing full documentation and operating instructions for all activities.
Consultant: Don Walklate.

Senior Programmer
IBM
Surrey To £5300

Experience of COBOL or ASSEMBLER (DDS) in a commercial environment, with sufficient experience to assist with the training and supervision of junior staff. In addition, duties will incorporate the maintenance of existing programs, the writing of new programs and modification of existing programs. Within a year, the opportunity will be available to assist with Systems Design and Analysis. Relocation assistance considered where appropriate.
Consultant: Niall Bradley.

6 Programmers
IBM
London (City) To £6250

Our clients, a major banking bureau, require COBOL and ASSEMBLER Programmers with US experience and applications experience. COBOL Programmers will join a team providing a networking distribution and sales information system service. ASSEMBLER Programmers will either join a team developing an on-line stockholding system, or a large payroll team with over 1,000 UK clients.
Consultant: Selina Mills.

Analyst
Peterborough To £5700

Preference will be given to IBM hardware knowledge although other machines will be considered. Equally, the company will consider senior programmers with the opportunity of transferring to systems work. Systems staff are split into two project teams of approximately five members each. Successful applicants will join one of these two teams and will assist the Project Managers and Senior Analysts in all phases of system development in a commercial/financial environment.
Consultant: Selina Mills.

PDP-11 Senior Progs
Middx. To £7000

ASSEMBLER language experience is essential under DOS. Programmers will be responsible for software and assist with hardware tasks. The company, a turnkey systems group, build mini systems for the insurance industry and maintain hardware and software thereafter. Systems include dual processors, big discs, VDUs and printers. Software includes own high level language, considerable development potential but more geared towards hardware than applications. Experience of installing turnkey systems would be especially advantageous.
Consultant: Don Walklate.

Systems Software
Engineer
Middx To £4500

Mini programmers with CORAL 6B or ASSEMBLER experience in communications or Process Control in a real time environment. You will become a member of a multi-discipline team controlling the design, production and commissioning of a Flight Information System. The major responsibility will be in integration and testing the software for 5 linked Argus 700 E's and numerous micro-processor based display controllers, linking with a number of external controllers. Some program writing may be required, but most important is the understanding of the software problems of real time mini-systems.
Consultant: Niall Bradley.

ICL Chief
Programmer
Hants To £6250

Adequate previous experience of ICL 1900 Series is essential, including GEORGE II and COBOL/PLAN. Applications experience should incorporate Sales/Purchase Ledger Accounting and Stock Control. Equally, any involvement with Filelib, Driver/Comms Manager or MAXIMOP would be especially advantageous. Primary duties will be to lead, guide and supervise a small team of 4 Programmers, assist with planning and implementing on-line programs, with planning and implementing on-line programs, with over 1,000 UK clients.
Consultant: Anne Tyler.

Programmer
Beds. To £4000

Manufacturing or Accounting experience, using PL/1/ASSEMBLER on IBM hardware is desired operating under DOS/DBOMP knowledge would be advantageous. Duties will incorporate writing, testing and modifying programs and/or systems software mainly on PL/1, assisting Analysts or Senior Programmers in design and specification of application programs and systems software and assisting in the administration and review of programming and documentation.

Applications & Package
Development - Birmingham
To £5,500 +

EMS urgently require experienced Analysts and Programmers to assist with both sophisticated on-line package development and custom-built systems working to agreed time scales. Subsequently, we need experienced staff with a sound commercial or industrial background, able to develop applications systems in Stock Control, Production Control, Sales Order Processing, Accounting Ledger Systems, etc. Equally, we need senior staff capable of assisting with the training of user staff on occasions and project leading custom built systems. Teams will handle up to 4 different Turnkey Systems each at any moment in time, ensuring substantial job interest. Sound career prospects are available with working and environment unlikely to be matched elsewhere throughout the U.K.
Consultant: Denis Filby.

Asst. Support Managers
c £6,000 + allowances

Large scale expansion within the EMS group and considerable diversification in new, high growth areas, now necessitates the company providing additional support in the areas of resources and resources control for our heavily overloaded Divisional Managers. Applicants should be aged 28-40 with a sound experience of systems and programming, having managerial abilities and seeking the opportunity of a sound career path within a multi-product service group with a track record second to none.

Duties will vary between Recruitment and Selection of new personnel for the EMS Divisional Consulting Support Groups to assisting clients' staff up and maintain adequate installation capacity. Equally, duties will incorporate periodic visits to clients' sites assessing staff productivity and adherence to targets. Equally periodic assistance supporting turnkey systems sales teams will be necessary, projecting systems development and programming projections, costing up project tasks and providing Divisional Managers with detailed reports for use in often substantial contract tenders.

Ability to liaise with and motivate field staff will be important, as will the ability to discuss client software problems in depth and advise accordingly. Training will be given to assess mini computer configurations and cost projections. Again, ability to present client systems requirements and package solutions, or individual systems alternatives at division level, or board room level will be important. Candidates should be educated to HNC/Degree level and maintain a sound businesslike appearance commensurate with a managerial support role. Both positions will be based in the Midlands but involving extensive UK support.
Consultants: Denis Filby/Niall Bradley.

IBM Analysts
Herts. To £6000

Opportunities are available for a large number of additional Analysts, with a minimum two years' experience, to join a major distribution company which is a market leader in its own right. Analysts should have applications experience in areas such as Accounting, Sales, Order Processing, Purchasing Systems, Cash flow monitoring, stock recording, forecasting, etc. Equally, any experience of conversion from large scale ICL to IBM would be especially valuable. Ability to function as a team member or even team leader under pressure conditions is sought as is a commitment to ensure that priority projects are completed on time. Sound career prospects are available for motivated, professional staff. Assistance given with relocation where appropriate.
Consultant: John Wood.

ICL Senior Programmer
Glasgow To £5300

Opportunities now exist to join a large engineering company using COBOL & PLAN under GEORGE II. Applications will include Accounting, Production and Stock Control, etc. Any knowledge of COMMS MANAGER or DRIVER would be especially advantageous as would previous on-line experience. Preference will be for HND-Degree in Maths or Computing Science. Relocation assistance given where appropriate.
Consultant: Don Walklate.

Systems Software Manager
Herts To £7500

We envisage applicants being aged 25-35 of smart, businesslike appearance. Essentially he/she will have five years' high and low level programming experience and considerable knowledge of systems software development. He/she must have successfully led/managed a systems software development team involved in interface disc based mini computer operating systems. The ability to liaise with sales staff and customer management throughout the U.K. will be desirable. Ability to work methodically under pressure will be expected and to lead others. Equally, you should be able to assess existing support software and make recommendations on future development policy. Candidates should have relevant experience in the area of systems software development, be able to work under pressure, have business acumen to meet the demands of the job and travel to customer sites and branch offices throughout the U.K. giving advice and diagnosing systems software problems.
Consultant: John Wood.

BIRMINGHAM COMPUTER CENTRE SYSTEMS GROUP - COMPUTER OFFICERS

The Computer Centre already provides a wide range of local and remote computing facilities to the University. These are now being further extended by the installation of a large dedicated interactive system for both teaching and research and also by participation in the development of the Midlands University Computing Network.

The Systems Group at the Centre will be actively involved in all aspects of these developments. Applications are invited for two posts of Computer Officer in this Group. Applicants should have several years' experience in systems software and hardware in a service environment, as shown by the successful completion of several projects. Experience in graphics or in data communications would be advantageous. A higher degree is desirable, but clear evidence of previous work successfully completed is equally important.

SALARY RANGE £2,804 to £4,811 (Grades 1 to 6) plus superannuation and USS.

For information from the Academic Registrar, Science and Engineering, University of Birmingham, P.O. Box 363 Birmingham, B15 2TT, to whom applications (three copies) including a full curriculum vitae and naming 3 referees should be sent by 18th December 1977.

SENIOR MANAGEMENT INFORMATION SYSTEMS BASED WEST LONDON

Our clients, now one of the world's leading manufacturers of computers, are about to consolidate their Management Information Systems within the U.K. and Europe with that in the United States. This will necessitate the linking up of their numerous computer centres across Europe with those in the U.S. and the setting up of the necessary support and clerical functions. We have therefore been retained to look for senior management to head up such an operation. The positions are as follows:

MANAGEMENT INFORMATION SYSTEMS MANAGER**NORTH-WEST EUROPE/U.K. SALARY UP TO £7,500**

The successful candidate will be responsible to co-ordinate the development, the operation and the maintenance of a MIS system to support the Corporation's Management and Administration operation.

He/she will direct a staff of systems support specialists and operation staff within the United Kingdom and North-West Europe supporting the computerised information system. His/her main tasks will be as follows:

- * To direct development activities, programming and testing the on-going maintenance and enhancements to MIS.
- * To support the MIS planning, policy making and administration.
- * Analyse work requirements, plan the structure and scope of staff within the Corporate policies and objectives.
- * Formulate plans to management for investment and expenditure.
- * Direct and train staff in accordance with approved plans.
- * Control his/her operation to adhere to plan and budget.

The ideal candidate will have had at least 5 years in data processing, including 2 years' programming experience in COSOL in a large scale development project and have effectively managed professional staff. He/she should have had experience in working within a user department in the design, development and installation of application systems.

DATA PROCESSING INSTALLATION SUPERVISOR U.K.**SALARY UP TO £6,500**

Reporting to the Management Information Systems Manager he/she will be responsible for the planning, organising and control of all computer, unit record, data entry and telecommunications equipment. He/she will be responsible for assigning personnel and supervising the library activities, production control procedures, operating standards and data preparation activities. In particular his/her tasks will be:

- * Operate the hardware/software of the installation to support MIS.
- * Train personnel on all equipment.
- * Liaise with MIS systems support specialists in the installation of new procedures.
- * Establish program and tape library facilities.
- * Provide inventory of computer supplies and materials.
- * Schedule computer operations and workload.
- * Security of data and materials.
- * Supervise and control data entry staff.

He/she should have a minimum of 3 years in a computer operations environment, preferably using telecommunications. He/she must be capable of recognising, working out solutions for operational problems and the supervision of staff is most important.

These are ideal opportunities to join a fast growing organisation within the U.K. Interested applicants should telephone the Advising Consultant and interviews will be arranged as soon as possible.

Analyst/ Programmer Up to £4500

Based in a rural setting at St. Neots in Cambridgeshire, Samuel Jones and Company form a significant part of the Wiggins Teape Group, manufacturing adhesive tapes and papers.

A vacancy exists for an Analyst/Programmer to work in a small team developing an order processing and stock control system for implementation during 1978. Other major projects to follow will include a production control system.

The equipment, to be installed shortly, will be an IBM 3780 using VDU's on line to the host 370/148 which is remotely located at the Group's headquarters in Basingstoke.

This position would suit programmers of 3 years' programming experience ideally with some time spent in the 3790 area, who are looking for a new career step into a more responsible and demanding job.

The terms and conditions of employment are first class including relocation expenses as appropriate, with very good opportunities for further progression within the Wiggins Teape Group.

Major Opportunities in DP for Analysts and Programmers

Up to £4,700 plus productivity bonus

The Company
We are the largest British manufacturers of commercial vehicles and are committed to a major planned systems development programme at our Heavy Vehicle Divisional Headquarters in the North West of England.

The Installation
We currently have a 1Mb IBM 370 146 operating under OS/VS1 and are actively making use of the latest distributed processing concepts using minicomputers, data base and data communications techniques.

We are looking for
Analysts and programmers who have a minimum of 2 years DP experience preferably in a manufacturing environment. Knowledge of data base and on line systems would be an advantage. Programmers should have a sound knowledge of PL/1, Assembler or Cobol.

We are offering
• A challenging and exciting environment with good career potential
• Employee car purchase plan
• Over 4 weeks annual holiday
• Assistance with Relocation where appropriate
• Other benefits which are to be expected from a large company.

Applications should be forwarded to:
J.T. Swindhurst Recruitment Co-ordinator
Heavy Vehicle Division

Leyland Truck & Bus
King Street, Leyland, Preston, Lancs PR6 1SN.
Telephone: Leyland 21400 Ext. 73

Or telephone Leyland (07744) 34419 (24 hour answering service) for an application form stating your name and address and the appointment you are applying for.

U.K. SALES MANAGER

Computer Peripherals

Income £10,000, plus Company Car

This British Company has established itself as a profitable and successful manufacturer of Computer Peripherals, including input/output devices, printers and test instrumentation.

Their expansion plans, which include a new custom built manufacturing plant in Buckinghamshire, mean that they will appoint a new U.K. Sales Manager who will manage the sales of the company's peripheral division.

Background of the applicants must include either sales, marketing or product development experience in the computer peripherals industries. In addition, he should have sound experience in negotiating sales with both end users and OEM's.

The successful applicant must be prepared to accept responsibility for the division's sales targets, profitability, staff motivation and training and also to work closely with the company General Manager to achieve their objectives.

The company have ambitious business expansion plans and the U.K. Sales Manager can look forward to good career progression in an ambitious and highly motivated company.

To arrange an interview, write or telephone immediately quoting Ref. CW165.
